17 May 2024

CONSUMER INFLATION ADVANCES 3.4% IN APRIL; CORE PRICES UP 3.6%

Consumer prices increased in April and remains above last year's levels. On an annual basis, prices rose 3.4% in April, a slight softening from the 3.5% growth last monthand. On a monthly basis, prices increased 0.3% after rising 0.4% the previous month.

Core inflation, which excludes more volatile food and energy prices, increased 0.3%, below the 0.4% growth of the previous three months. Shelter and gas costs weighed heavily on consumer expenses, contributing to over 70% of the monthly increase in the index for all items. Flat food prices help offset the impact of higher energy costs.

April's inflation reading does break the string of consecutive increases that spurred concern over a second wave of inflation and a reignition of interest rate hikes. Cooling inflation coupled with a slowdown in job gains in April could be enough to push the timeline up on when the Federal Reserve begins to dial back interest rates.

At its May meeting, the Fed policy-makers announced it would maintain the federal funds rate range at 5.25% to 5.5%, where rates have held steady since July. Fed officials have said they anticipate rate cuts for 2024 but need more confidence that inflation is heading toward the 2% target rate.

STRATEGICALLY FOR CREDIT UNIONS

Although the Fed's aggressive action to cool demand appears to be slowly bringing inflation back down to a more palatable level, the path to 2% hasn't been easy and still appears to be further out than policymakers would prefer.

Fed Chair Jerome Powell responded to the high inflation readings earlier this year by dropping his previous suggestions that interest rate cuts were likely in 2024. Instead, he stressed that the Fed's policymakers need "greater confidence" that inflation is falling to their 2% target before they would reduce borrowing rates from high levels.

We suggest that if inflation — and the overall economy — continue to cool, the Fed could still cut rates twice this year. But that probability weakens every month that core prices remain above 3%. Core prices increased 3.6% in April.

With 11 rate hikes from March 2022 to July 2023, the Fed's policymakers raised their key rate to a two-decade high of 5.3% in an effort to quell rising prices, which peaked at 9.1% in June 2022.

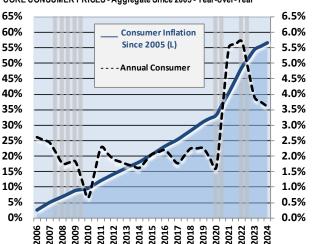

Upcoming policy changes could also play a role here: Rising trade restrictions or continued fiscal overspending could propel price momentum - despite market bullishness, as investors keep trading on the premise that subsiding inflation allows interest rates to eventually ease.
