Field Checklist

BIRDS OF
RIO BOSQUE
WETLANDS PARK
El Paso, Texas

Legend	
Sp --	Spring (March-May)
Su --	Summer (June-August)
F --	Fall (September-November)
W --	Winter (December-February)
A -- Abundant	should see 90-100% of time in proper habitat and season
C -- Common	should see 50-90% of time in proper habitat and season
U -- Uncommon	should see 20-50% of time in proper habitat and season
R -- Rare	should see <20% of time in proper habitat and season
X -- Accidental	only 1 or 2 records
/ --	when preceding summer status, indicates the bird's presence in summer is due to early southbound migrants
* --	breeding confirmed
† --	breeding suspected
‡ --	formerly nested
August 2025	Total Species: 268

Rio Bosque Wetlands Park is a 372-acre City of El Paso park located next to the Rio Grande. UTEP manages the site under an agreement with the City's Public Service Board. At the park, UTEP and its partners are working to establish an approximation of the mix of habitats found in the river valley in pre-settlement days. These habitats supported a wealth of birds; bird numbers and variety at Rio Bosque have increased since restoration efforts began. The centerpiece of the restoration work is a wetland project built in 1997. When available, treated wastewater from the treatment plant just north of the park flows through the park in a former meander of the Rio Grande and is used to flood large, shallow wetland cells.
