ELECTROSTATIC DISINFECTION

While our regular cleaning services have included disinfection protocol since 2007, Electrostatic Disinfection is another tool in our toolbox. This service may be added as a 1-time service or on a regularly scheduled basis to our existing cleaning services or provided as a separate service for either residential or commercial application?

What is Electrostatic Disinfection?

A broad-spectrum, liquid disinfectant that contains no bleach, no harsh chemicals, is gentle enough to use around kids and pets and is safe for use on all hard surfaces. Electrochemical activation takes a brine water, sends it through an electrostatic sprayer and adds electricity. This reaction causes the saltwater to be separated into an anolyte solution and a catholyte solution.

The anolyte solution, known as Envirocleanse-A (ECA), contains the active ingredient of hypochlorous acid (HOCl) and water. The hypochlorous acid acts as a disinfectant and is the same chemical produced in our own bodies by white blood cells to attack pathogens and fight infections.

ECA replaces chlorine disinfectants and other toxic oxidizing disinfectants. Because ECA is made up of naturally occurring substances, it has been awarded certification from the Organic Materials Review Institute (OMRI). ECA also is noncorrosive, nonflammable, sustainable and contain no harsh chemicals. No masks, gloves, or special equipment is required to use ECA. ECA naturally breaks down into a saltwater solution after degrading.

ECA can be used in healthcare, food services, janitorial services, oil and gas fields, water reclamation, cruise lines, livestock and poultry, childcare centers and gyms, offices, residences and more. ECA's GHS chemical hazards rating of 0, 0, 0, 0 makes it gentle enough to use around kids and pets, while its powerful disinfectant properties enable ECA to be highly effective in antimicrobial care.

What safety measures are required?

No PPE is required during application and the disinfected area may be entered after only 1 minute.

SALE: \$49/1000 sq. feet.
