

High Performance Color

Color is a powerful tool used in commercial applications to help create desired environments. Mostly, it is an individual preference.

Many people prefer daylight or cool white light for offices, garages, and retail applications because the light appears brighter. Most hotel lobbies, restaurants, and bars will opt for the more intimate and personal warm colors. Neutral white (3500K) has become extremely popular with architects in new construction with soft white (3000K) illumination providing a nice middle ground choice for most indoor and outdoor settings.

TurboLED is the new energy-saving LED light source available in Luraline fixtures. In addition to the previously unheard of lumen/watt ratios, TurboLED offers the full spectrum of color temperatures, rendered with LED technology that creates rich, vibrant, and consistent lighting to suit any specification requirement.

Candlelight / 2200K This is an exceptionally soothing light, rich in vibrant red tones. With a 90+ CRI, it is ideal for intimate settings, providing a warm light that fills a room with an even glow.

Warm White / 2700K The warm white color tone comes in a 90+ CRI. It brings out the natural hue of colors, especially greens, reds, and yellows, making them appear warm and saturated.

Soft White / 3000K The TurboLED standard. This is an all-purpose light with just a hint of warm tone. Ideal for general lighting needs either indoor or outdoor, in residential and retail applications. The light generated is crisp, like traditional Halogen, yet soothing.

Neutral White / 3500K A hybrid of both cool and warm tones, this light is clean and crisp. Suitable for most general lighting applications.

Cool White / 4000K Suitable for the general lighting requirements of commercial applications including offices, parking garages, and warehouses. At 4000K the light generated is cool and bright.

Daylight / 5000K The brightest light possible, closest to actual sunlight. Use of this lighting brings the outdoors into your living space. Ideal for security lighting and settings requiring attention to every detail.
