

# The Black Patients' Guide to COVID-19

By Dr. Ruth Arumala, in partnership with Color Of Change

On constant loops on **every news outlet and social media feed** is the looming risk of contracting the novel "**Coronavirus**" and the developing life-threatening COVID-19 disease. With no available vaccination and only **experimental disease** fighting drugs available, the highly contagious **virus has produced an unprecedented worldwide pandemic.**

Unfortunately, in the United States **there are recent reports from various metropolitan areas such as New Orleans and Chicago** that the virus disproportionately **results in severe disease and mortality** in Black people. In **order to adequately** combat this disparity, **Black Americans must be armed with accurate knowledge** about the viral illness and **ways to navigate the current healthcare environment.**

## MYTHS VS. FACTS

**MYTH:** The Coronavirus does not affect Black People. **FACT:** False. The Coronavirus is impacting Black Americans at higher **rates and resulting in more severe disease.** In Louisiana for example, Black Americans make up 32% of the population, yet **comprise 70% of Coronavirus deaths.** In Chicago, Black people are dying at six times the rate that of white people. Similar disparities are occurring all over the country."

**MYTH:** The Coronavirus only affects older, sick individuals. **FACT:** False. **There have been reports of infants as young as four months old with severe symptoms of COVID-19.** And **one of the most heartbreaking U.S. deaths** occurred when five-year-old, Skylar Herbert passed away in Detroit.

**MYTH:** If I **wear a mask**, I do not have to practice social distancing. **FACT:** False. In order to adequately protect yourself and others from the Coronavirus, you should continue to practice social distancing, while also adhering to the **new CDC recommendations to wear masks that cover your mouth and nose.**

## BEST PRACTICES WHEN YOU SUSPECT YOU OR YOUR LOVED ONE HAS COVID-19:

The known symptoms of COVID-19 include fever, chills, muscle aches, difficulty breathing, **loss of taste and or smell, nausea, vomiting,** and a change in bowel movements--particularly diarrhea. Although **these can also be symptoms** of the common cold, influenza infection or **seasonal allergies, we need to proceed** with caution during the **peak or near peak of the coronavirus pandemic.**

## THE KNOWN SYMPTOMS OF COVID-19 INCLUDE:

Muscle aches

Fever

Difficulty breathing

Chills

Loss of taste and/or smell

Muscle aches

Change in bowel movements Nausea

### **If you are experiencing these symptoms:**

- Call your health provider.
- Be very specific about your symptoms.

If there are **any known contacts that have tested** positive for the Coronavirus, immediately **disclose** that information to your provider. Include any underlying health conditions and what you do for a living--especially if you are public

facing, an essential worker, or have not been able to "shelter in place."

- **If you are experiencing persistent fevers and sustained** shortness of breath, **please present to the nearest emergency department. This indicates severe disease.**

### **IF YOU ARE EXPERIENCING THESE SYMPTOMS:**

- Call your health provider
- Be specific about underlying health conditions and known contact with someone who tested positive
- If you are experiencing persistent fevers and shortness of breath go to the **nearest** emergency department.
- **If you are sent to an emergency room or urgent care, be sure to include the following inquiries about your care - Specifically ask to be tested for COVID-19** and indicate any underlying health conditions.
- **If you are given an alternative diagnosis, ask if you should self-quarantine, as well as the specific amount of time you should remain in self-quarantine.**
- Ask your provider if you should replace personal hygiene items like toothbrushes or pillow cases.
- Ask your ER provider if a chest X-Ray is indicated.
- Set a follow-up appointment with your provider with a specific date which can be done via telemedicine. As a general rule, everyone seen in the hospital should follow up with a provider in 7 - 14 days.
- Do not leave the emergency room without having all of your questions answered and having a good sense of the severity of your symptoms.

## If you feel that your symptoms are not being taken seriously:

- Be persistent. Reiterate your symptoms and any underlying health conditions in a calm manner.
- Share your fear, anxiety and mental anguish about contracting the virus and developing the disease.
- Ask for denial of a test to be noted in your chart.
- Ask the provider if they have access to tests. If they do not, ask for the closest testing location.

Although the novel coronavirus and COVID-19 pandemic can produce significant anxiety and trepidation, **there are ways to successfully prevent and navigate this disease. Please do your part to stay at home, wash your hands frequently, clean hard surfaces several times per day, wear face coverings when in public, and maintain social distancing (> 6 feet from others) when in public.**
