Math 1496 - Sample Test 2

1. Find the derivative of the following

$$(i) \qquad y = x \sin^{-1} x$$
$$(ii) \qquad y = \ln(x^2 + e^x)$$
$$(iii) \qquad x^2 - xy + y^4 = x - y$$

2. If $f(x) = x^3 + x + 1$ find $(f^{-1})'(3)$.

3. Find the absolute minimium and maximum of the following on the given interval

$$(i) \qquad f(x) = 1 - x^2 \quad \text{on} \quad [-2,3]$$
$$(ii) \qquad f(x) = 2x^3 - 15x^2 + 24x \quad \text{on} \quad [0,3]$$

4. State the Mean Value Theorem. Verify the Mean Value Theorem for the following

$$(i) \qquad f(x) = x^3 - x \quad \text{on} \quad [0,2]$$
$$(ii) \qquad f(x) = \frac{x}{x+2} \quad \text{on} \quad [1,10]$$

5. If $y = x(x-4)^3$ calculate the following

(i) The critical numbers

(ii) When y is increasing and decreasing.

(iii) Determine whether any of the critical numbers are minimum or maximum.

(iv) When y is concave up and down and determine the points of inflection.

(v) Then sketch the curve.

6. A ladder 13 feet long is resting against the wall of a house. The base of the ladder is pulled away from the wall at a rate of 2 ft/sec. At rate is the tip of the ladder moving down the wall when the base of the ladder is 5 ft away from the wall?

7. A paper cup in the shape of an inverted cone with height 10 cm and a base of radius 3 cm, is being filled at a rate of 2 cm^3/min. Find the rate of change in the height of the water when the height of the water is 5 cm.
