

Fortune 500 Performance

The team that created Island are pioneers in networking. The products they have created over the past four decades have been in the world's largest companies. Now all that expertise is available in Island.

With its premium, enterprise-grade hardware and high-speed packet engine, Island delivers the same performance as routers in today's large businesses.

- 3.7 Gbps max throughput lets all your employees work to their fullest capacity
- 2,000,000 packets per second gives you blazing-fast speeds, even when all users are on and active
- 165,000 connections per second ensures faster webpage loads
- 5,000-device capacity means Island can handle any load you put on it
- 1,000 LANs, WANs, VLANs, and VPNs in any combination are supported to future-proof your network

Island Router: Performance and Security for All Your Offices.

Get enterprise-grade quality everywhere you and your employees work. Protect all your locations with the speed, capacity, security, and control you need.

Every Office Needs Island Peace of Mind

Security should not be location-dependent. With its best-in-class VPN, Next-Gen firewall, and constant threat filtering, Island delivers top speeds even with every security feature enabled.

Real time, automated threat filtering

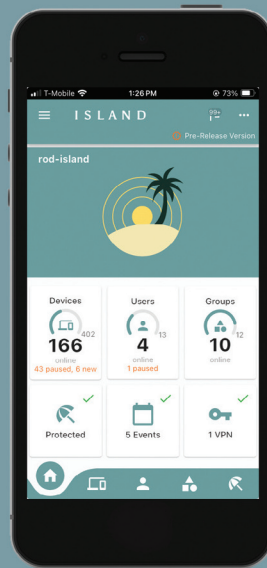

The Webroot database constantly monitors for hacking, phishing, BOTNETs so your network stays safe no matter who accidentally clicks on a bad link.

Never in the cloud, zero-trust model

Because of Island's huge capacity and carrier-grade packet engine, all logging, history, device information, as well as the filtering database is stored locally and delivered at wire speed.

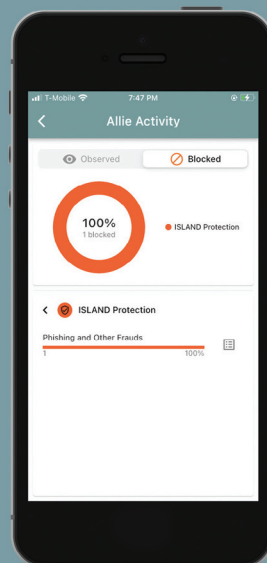

Best-in-class VPN

In addition to its WireGuard VPN client, the unique Island Express configuration provides highly secure, easy, fast Island-to-Island set up.

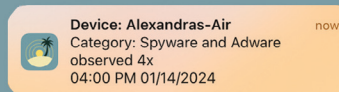

Its intuitive, at-a-glance dashboard tells you immediately if all is well on the Island.

From the moment you plug it in, Island protects your business from a full range of malware.

With a quick tap, see what's been blocked, on whose device, and even drill down to see the exact URL.

Want real-time updates? Have Island send the notifications you want to your phone.

Business and Home Essentials by Island

Hybrid work requires the same security and performance you need in any office, yet with the simplicity and flexibility required at home. Island provides these features to everyone, everywhere.

OFFICE PERFORMANCE AT HOME

Premium-grade hardware ensures your Zoom calls don't drop, your day trades are fast, and the days of rebooting are over.

BEST-IN-CLASS PRODUCTIVITY CONTROLS

Allow Internet access to specific sites, or prevent access to entire categories like social media during work hours.

NOTIFICATIONS: CUSTOMIZABLE, REAL TIME

Receive immediate alerts about new devices attempting to access the network, devices having connection issues, and much more.

ALWAYS ON WITH DUAL WAN FAILOVER

Using dual-WAN connections via cable, cellular or satellite means no worries during Internet outages. If needed, you can pause all other users' access until both Internet links are back up.

SEPARATE WORK FROM THE REST OF THE FAMILY'S ACTIVITIES WHEN WORKING FROM HOME

Easily set up VLANs and VPNs to isolate your work data from kids, guests, and the rest of your household.
