Welcome to Modern, State-of-the-Art Dentistry and experience Dentistry like never before!

Our Chicago dental practice started in 1941 by Dr. Wilbert Gordon and Dr. Theodore Gordon has always been a leader in new dental technology. Back then, they were leaders in Dentistry & Dental Education. This practice was and will always be at the forefront in the expansion of New Technology in Dentistry.

Dr. Stephen Gordon has been in full time dental practice for over 30 years. He formerly was an Assistant Professor in the Department of Restorative Dentistry at the University of Illinois and has lectured extensively on restorative and cosmetic dental procedures. He has also lectured nationwide to dentists on these topics : New Technology in the Dental Practice, Laser Treatment in Dentistry, In-Office Teeth Whitening, Aesthetic Porcelain Restoration, High-Tech Root Canal Treatment, Digital Radiography, Dental Ozone Therapy and Minimally-Invasive and Non-Invasive Dentistry.

We know that Problems with Oral Health leads to Problems with Overall Health since the Oral-Systemic link shows that when patients improve their Oral Health their Overall Health also improves!

What we excel in doing for you...

MERCURY-FREE & MERCURY-SAFE – Your silver fillings contain at least 50% Mercury (the MOST poisonous and toxic substance that is not radioactive) and are a negative to your health – WE can safely remove and replace them with non-mercury containing safe restorations.

CEREC – 1 Appointment, Laboratory quality Crowns, Inlays, Onlays, Veneers; no second appointment necessary.

Invisalign – Easily worn CLEAR plastic custom-fitted mouth trays to Orthodontically move teeth without braces

ZOOM! – 2012 NEW LED In-Office Teeth Whitening system – Fantastic Results!

PerioProtect – Easy to wear soft rubber mouth trays that significantly reduce Periodontal problems (without Surgery)

Snap-On-Smile – Easily worn dental restoration that can give you the Perfect Smile, without using a drill!

NV Laser – Used to treat gum irritations and promotes faster healing than prior treatment methods. ALSO we have the ability to *painlessly* treat Cold Sores and Canker Sores by reducing healing time.

Hospital Grade Sterilization with Monitoring System – For clean, safe sterile instruments

DIAGNOdent – Painless Laser Decay Detector, which can ACCURATELY located decay, often years before it might be visible on x-ray (this is truly an IMPARTIAL second opinion!)

Decay Detecting Stain – Red color to visually show us exactly where the cavity is located and the extent of the decay, thereby eliminating the removal of sound, non-decayed tooth structure.

CMU3 Ozone Generator – Gives us the ability to reduce decay causing bacteria and allow the tooth to remineralize, often without the need for anesthetic, drilling and placement of a filling (Truly non-invasive dental therapy!)

Kavo Rondoflex – HYDROABRASION UNIT – Small fillings can now be placed without any drill being used!
