

Environmental Canine Services LLC

Ship and Sniff!

A cost saving sample screening method

Advantages of *Ship and Sniff!*:

- Fast identification of “hotspots” of human wastewater contamination in surface water
- Significant cost-savings over DNA lab testing
- Quick turnaround time
- Flexible scheduling

How it works:

- You collect water samples and prepare them for shipping according to our quality control protocol.
- You ship them to us for canine scent testing.
- We include scenting of field blanks, sewage samples, and duplicate samples for quality control.
- You receive a report of the results quickly.

Canine scent testing of storm water and surface water samples is a method developed by our company and backed by research to identify the presence of human wastewater and its harmful bacterial contamination. The canines only alert to the presence of human source, not animal source contamination.

Pricing:

\$35 per sample plus you pay for the sample bottles and shipping costs.
