

Treposno

Medium-Late Maturing Orchardgrass

Treposno is an improved, medium-late maturing variety selected for increased yields and improved cold tolerance. Treposno also has a very high rating for resistance to rust as well. Its broader spreading and aggressive crown habit gives Treposno the ability to tolerate close grazing. Treposno is very broadly adapted, doing well in a wide range of climates and soil conditions. Treposno performs well in a mono-stand or in mixtures with other grasses and/or legumes. Its maturity range is suitable with alfalfa. It is ideal for hay production, grazing, silage and green chop.

APPLICATIONS

- Excellent as grass component in alfalfa/grass hay mix
- Well suited for pure grass hay to insure optimum quality
- Excellent for grazing, either as the sole grass component or a component in a grazing mixture.

MANAGEMENT

- Planting Rate (Pure stand): 12-15 pounds per acre
- Planting Rate (OG/AL mixture): 5-8 pounds per acre
- Planting Depth: 1/4—1/2 inch
- Cutting Height: Ideal cutting height to promote persistence is 3".

FEATURES

- Medium-late Maturity
- Excellent Disease Resistance
- Aggressive Crown Habit
- Improved Winter Hardiness

BENEFITS

- Allows for optimum quality both in mixtures or straight
- Improved persistence and quality.
- Improved persistence during grazing
- Improved persistence in northern climates

PERFORMANCE DATA

| Variety | % Mean | | |
|----------|-----------|------|-----------|
| | Of checks | Rust | Leaf Spot |
| Treposno | 102 | 4.5 | 3.6 |
| Husar | 99 | 5.6 | 3.8 |
| Lidaglo | 101 | 5.3 | 4.3 |

Disease rating: 1=no disease; 9=dead plant
Results of German PVP Trials. Summary of 2007, 2008 and 2009 data.
