Re: CD-1 Ignition

Mr. Gould,

This letter is to serve as acceptance of the CD-1 Pro Bracket Ignition for use in all Sportsman Classes, where permitted, in NHRA competition. This acceptance is contingent upon the following criteria:

- All units must be installed and used according to manufacturers instructions
- All units must use the originally supplied software provided by Daytona Sensors LLC
- All units must match the model and configuration as presented to the NHRA
- All Ignition Boxes must utilize a tamper proof method of preventing or indicating unauthorized entry. (i.e Tamper Evident Labels or Tamper Proof Screws)

Should there be any change in the manufacturing process of this product; NHRA should be informed in advance.

Thank you for your support of the NHRA.

Best Regards,
