

Schedule your Home Performance assessment and find out where the money is escaping from your home.

### AIR SEALING

Your contractor checks for air sealing opportunities.

Sealing air leaks will reduce energy loss and make your home more comfortable.

### CO TEST

Your contractor checks for carbon monoxide.

Health and safety is a critical component. A carbon monoxide (CO) analyzer is used to check combustion appliances (stoves, furnaces and water heaters) for carbon monoxide levels.

## HOME PERFORMANCE WITH ENERGY STAR®

Save up to 30% on your energy costs.

Home Performance with ENERGY STAR is your "whole-house" solution for a more energy efficient, comfortable home.

## ABOUT HOME PERFORMANCE WITH ENERGY STAR

It's amazing how comfortable and energy efficient your home could be with our "whole-house" solution.

Home Performance with ENERGY STAR, brought to you by the New Jersey Board of Public Utilities and its *Clean Energy Program*,™ is an efficient approach to home improvements:

- Reduces energy costs by up to 30%
- Increases comfort and durability
- Helps reduce your carbon footprint
- Provides you greater peace of mind and confidence – only contractors who have the BPI GoldStar designation can be a part of Home Performance with ENERGY STAR

This nationally acclaimed home improvement program uses the best of home testing techniques and upgrades to increase your home's energy performance, comfort, health and safety. Using a "whole-house" approach, specially trained and certified technicians assess your home from top to bottom, looking at the following components:

- Air sealing opportunities
- Insulation levels
- Heating/cooling equipment

Following your assessment you will receive a list of recommended measures to improve the energy efficiency of your home. All the work is done for you by BPI GoldStar contractors who "test in and test out" to make sure your home is operating efficiently, safely and comfortably.

Did you know that up to 60%\* of energy used to heat and cool homes is wasted due to leaky ducts, inefficient equipment, poor insulation and air leaks?

### ▶ High Quality Air Sealing

Homes can lose as much as 25% of their heating and cooling dollars due to inadequate sealing. Contractors can eliminate this problem by sealing joints and spaces in attics, ductwork, electrical outlets and other areas.

### ▶ Sealing up Ducts

Insulating and sealing cracked or disconnected ducts helps distribute air more evenly and efficiently and keeps your home more comfortable. Sealing and insulating ducts can improve the efficiency of your heating and cooling system by as much as 20 percent — and sometimes much more.

### ▶ Equipment Replacement for Heating Systems and Central Air Conditioning

If your home's heating and cooling equipment is more than 10 years old, it may be time for a high efficiency replacement. ENERGY STAR qualified heating equipment can be up to 15% more efficient than standard models.

**Don't miss out on these great incentives!**

- ▶ Low-interest financing and rebate options are available to pay for the improvement work.
- ▶ Incentives are also available for multi-family buildings.
- ▶ Check [NJCleanEnergy.com/HP](http://NJCleanEnergy.com/HP) for funding that may be available for municipal electric, oil or propane customers.

**"Every homeowner should participate in this program. It saves energy and money, and provides peace of mind. Each homeowner who participates is helping New Jersey and the United States become energy self-sufficient. We are helping save the environment. That's a great lesson and legacy to pass along."**

– Bob Hoffmann, homeowner
