

# DYNA JET 60

## VACUUM TUBE TESTER

Donation: \$350.00 o.b.o.

This fantastic device tests your amp's tubes for voltage leaks, shorts, and quality. All you do is plug the tube into the appropriate slot, dial in the proper heat settings and such, and push the buttons on the right. It's super easy to do. One of the books included has the settings needed for literally any tube you might have.
