

Frisco Feeding Speech Therapy

Our Approach to Therapy Services

*In-Home, In-School, In-Clinic
Family Oriented Therapy*

Our therapy is designed with consideration of the whole child. We know your child's speech, language, and feeding skills can affect other areas of development. Our personalized therapy plans target your child specific needs to foster success across all aspects of their life.

Parents are the largest influence in a child's life, which is why parent involvement is key to therapeutic success. We encourage parents to participate in the entire therapeutic process.

Speech-Language Therapists can play a primary role in the evaluation and treatment of infants, children, and adults with swallowing and feeding disorders. They have considerable training in normal and abnormal anatomy and physiology with respect to respiration, swallowing, and speech.
