

May 29th Permit Kyle Estes garage. The foundation will be established, but framing construction shall begin in the following year.

June 1st. Office Hours: Permits.

June 2nd. Visit with Scott Efron to inspect the foundation in violation and to execute a permit and bring the constructed foundation out of violation. The size of structure is 36 ft. wide x 80 ft. long to equal 2880 sq. ft. This is an “after the fact” permitting process. The fee resulted at \$576.00 x2 = \$ 1152.00

A notation was marked on the permit stating:

Foundation completed and backfilled.

No further construction onto foundation shall be done until the proposed use of building is determined and the building use is accepted within a “conditional use permit” for the campground.

This permit resolves existing non-permit violation.

The stoppage of construction at the foundation site remains in effect as reflected in the permit. The permit executed eliminates the violation of November 2016. Because the conditions of the “violation has been corrected or resolved, an application for a conditional use permit or site plan review” may be approved and the process may move forward. An application for planning board review was submitted during October 2016. The application is pending on a submission from Terridyn Consultants.

Furthermore, the Planning Board requested that the Selectmen submit a memo stating that the campground & Scott Efron permit violation with a stop work order has successfully been “resolved”, and currently the violation no longer exists.

Wes.
