

## Hotel Management Solution

The RCA Hotel Management Solution Package & Software substantially decreases the hidden costs of owning a TV. The maintenance requirement for each TV set can become costly, updating max volume, changing a channel lineup or reprogramming TV's for new content providers requires hours of labor when you must visit every hotel room to perform an update. With the RCA Hotel Management Package, send a signal to all your TVs at once and reprogram them in minutes, saving both time and money.

## Features

### Hotel Channel

Create a custom channel just for your hotel. Add video files, custom content or advertising to play on a house channel in all of your rooms.

### Time Saver

The RCA HMS, updates every TV in minutes from the comfort of your desk. The traditional way of cloning takes minutes to apply new settings or channel lineups to each TV per room.

### PC Configuration

RCA HMS allows all channels to be mapped and features to be set in no time at all. It can export settings data to a TV channel for remote installation or by USB.

## Screenshots

Easily drag & drop TV settings you want to change.

Quick access to all features and settings available on your TV.

Easy settings control, with numerical input, and drop down selections.

## Management

### Content Providers

Manage your existing cable or satellite provider's channel lineup with the RCA HMS. Easily set, update, remove & reorder channels from your computer, and send the updated channel list to your TV.

### Unique Content

RCA HMS Channel Multiplexer organizes new channels for data, digital signage, custom hotel channels, and broadcast transport streams.

### Custom Settings

Customize your TV settings easily with RCA HMS. The software interface allows users to fine tune their TV settings quickly and easily.

## Technical

### Summary

The RCA Hotel Management Solution consists of software configuration applications, channel multiplexer hardware and QAM modulators, to network your television system to a centralized PC.

### Software Configuration Application

Easily configure your television settings using a graphical interface on your computer. Manage your channel lineup, channel labels, settings, and startup logos with this application. Output files can be loaded into your televisions through the traditional USB key, or you can send it through your RF network using the channel multiplexer hardware.

### Channel Multiplexer Hardware

Creates TV Channel programs for your hotel network with TV Settings files, startup logo files, hotel channel videos, and other entertainment content. This data can be distributed via IP network or TV Channel using a QAM Modulator.

### QAM Modulator

To remotely send data to your televisions, you need to play the data on a TV channel frequency. Use our QAM modulator, or use a spare modulator in your existing Head End system.
