

*The CBTB pool renovation committee
Consisted of
John Cooper, Mark Hill & Bill Saunders*

Attempts to keep from repairing the pool

Spending on maintaining the pool was escalating at a high rate due to unidentifiable leaks, manual labor because of non-working mechanics, refilling the pool with community water and chemical costs.

To find the ongoing leaks, a diver was hired. Cost: \$600±

A previous CBTB Board of Directors hired a company to install a well on community property to stop the high water bills the community had from using so much community water. Unfortunately that well provided only sandy, dirty water and cannot be used for the pool and is not used at all at a loss to the community of about \$3,000±.

Issues to be resolved include in pool

*Having very poor circulation in the main pool
Having no circulation in the baby pool
Having to overfill both pools to keep the water fresh
Manually tossing chlorine into the pool
Having to refill the pool annually
Leaks in the pool that required constant refilling
Having to drain and refill the pool each year
Having to continue to buy chlorine at ever increasing costs*

Due diligence in hiring the company to repair the pool

*4 proposals from local pool companies
were obtained and reviewed at board meetings.
Community comment and suggestions
were included at the board meetings.
The board of directors chose the proposal
that best resolved these issues.*
