

Welcome Back

... your customers and staff into a healthier work environment!

Wherever people gather, **UV Angel's** singular focus ensures a pathogen-free environment whether it is bringing kids back to school, reopening the hospitality industry, restaurants, entertaining customers in sports venues or casinos, caring for patients in medical care facilities or retirement homes.

Unfortunately, this will not be the last pandemic, and we can better prepare to prevent the events we recently all experienced. By using its patented ultraviolet (UV-C) light technology, **UV Angel** uses a combination of hardware and software technology, providing users with the tools they need to ensure measurably safer and healthier environments, bringing peace of mind to staff and customers.

In the arsenal of infection prevention, ultraviolet lights (UV) are used throughout health care and other environments to neutralize microorganisms on surfaces, in water and in the air.

Designed directly into a traditional ceiling light fixture, **UV Angel Air** is an unobtrusive environmental treatment system that uses ultraviolet light to treat the air automatically and continually.

Air Series

Surface Series

Frequently touched surfaces get reinfected faster than they can be manually cleaned. Using an intelligent, automated UV light treatment platform, **UV Angel** can add an extra layer of safety by neutralizing potential threats.

UV Angel's elimination rates are up to 99.99%! Using the latest in advanced UV technology, lab studies have shown effective removal of pathogens from treated air and surfaces. **We can prove it!** Let us show you the research data. UV systems are American made and manufactured.

Look for **UV Angel's** happy customers: Starbucks, McDonalds, St. Jude's Children's Hospital, ESPN, Tishman Speyer (Commercial Real Estate), Phillips Edison (shopping center developers), V.A. Hospitals and Nursing Homes.
