

Rope Rescue Awareness

Our Rope Rescue Awareness course is roughly 12 hrs and can easily be taught on a Friday evening (4hrs) and all day Saturday (8hrs) if needed. RRA is a course for every emergency responder. We teach real world skills that will assist emergency responders to use rope to access, stabilize and evacuate the victim and themselves.

All equipment is provided by Hare Mountain Rescue although departments or teams are welcome to use the equipment provided by their respective teams. We teach basic knots and when and how to use them. We explain when and why to use ropes and rope systems. We use hands on training to share the skills needed to build an anchor, access the victim and secure the victim to a basket and safely remove the victim out of the danger zone.

All of our information is based off of real-world missions that we have been involved in. Together our team of instructors put in over 2000 hours of technical rescue training per year. We constantly update our courses to provide the best training with the most modern equipment, but we never forget our basics and the tried and true methods.

We feel that this course would be valuable to all FD, EMS, SAR, Game and Fish, Forestry and LEO responders. It is our hope that we will be given the chance to share what we have learned to assist others. So that when the time comes, they can be safe and successful.
