

# The Science Behind SmartShield™

Antimicrobial Surface Protectant

Actual electron microscopic image of SmartShield™ antimicrobial “shafts” bonded to a surface.

## 21st Century Nano Technology

When sprayed on a surface, SmartShield™ quickly bonds creating a microscopic layer of organic bristle-like shafts.

These bristles, although invisible and harmless, create a surface that is inhospitable to bacteria, mold, mildew, algae, fungus.

When any of these organisms contact the treated surface they are unable to form a bio-film, thrive and therefore are eliminated. This mode of action works continuously for 3 months.

### EPA-Registered

SmartShield XLC™ is an E.P.A. Registered antimicrobial surface protectant.

## Approved For Use On

- Gym mats
- Lockers
- Showers
- Bath rooms
- Equipment Cabinets
- Shoes and Sneakers
- Equipment Bags

## Benefits

- Lasts for 3 months.
- Does not wash off under normal use
- Odorless and colorless
- Safe for all surfaces and fabrics
