

Advanced Climbers Course

Course code: TATR/AC

Course Objective: To provide delegates with the knowledge and practical experience to enable them to climb the structure using protected and unprotected access ways and to work safely in a variety of exposed locations.

Audience: Persons who are required to climb on towers & masts, for construction or maintenance purposes.

What the course includes:

- Legislation when working at height
- Personal Protective Equipment – inspection & use
- Access ways – protected & unprotected
- Climbing techniques in exposed locations
- Temporary fall arrest systems
- Risk assessments
- Hazards when climbing & emergency procedures.

The course will involve elements of classroom and practical tuition. Emphasis will, at all times, be on practical climbing under the safe supervision of an instructor. Delegates will be continually assessed throughout the course. A short written paper and assessed climb will be used to measure attainment of objectives

Course duration: 2 Days

Instructor to student ratio: 1:6

Period of valid certification: Successful completion will result in certification for a Maximum of 3 years (certification periods may be shorter, depending on individual company's climbing policy). A short re-assessment will continue the certification, if undertaken within the 36-month period. The successful delegate will be deemed competent to climb protected access ways, using the systems used on the course and temporary systems when required to do so. They will be deemed competent to work in, and outside, protected areas on the structure.

What to bring with you: Safety shoes (steel toe cap) & warm suitable clothing.
