Have your current kitties, if applicable, been tested for FIV (feline immunodeficiency virus) and FeLV (feline immunodeficiency virus)?      yes or no

If yes, positive or negative test results?    positive or negative

\* Please note, Cattailz.org **DOES NOT** test for FIV or FeLV. Our position on the diseases is that cats can live very happy, healthy lives, even with these incurable diseases. In addition, there are false positives to these tests, as we have personal experience with a false positive FeLV test, therefore, there is no need to test as we do not believe in euthanizing a cat that tests positive for either disease.
