

RESTORE

Affect on Strawberries

**Bluegrace
Environment**

Restore fluid diluted 1,000 times and 2,000 times, was applied to mildew on the leaves of strawberry plants and the plants were examined on the 7th day.

Mildew turned solid like a plaque where Restore diluted 1,000 times was applied to the leaves.

Dew on the top of the leaves showed efficient metabolism.

When this happened in the past, the strawberry yield exceeded expectation.

The fruit was not very big where Restore diluted 2,000 times, was applied.

Results

The fruit on plants sprayed with fluid diluted 1,000 times was bigger than the fruit on plants sprayed with fluid diluted 2,000
