

My name is Diane Offill and Without the people who donate and help people as myself I may not be here today.. I found my cancer as I was just sitting at my computer and for some reason I reached to feel around on my breast and was scared right away due to me feeling a knot on my right breast. At first I thought maybe it was due to having too much caffeine. I continue to feel it and got worried, So I called my Doctor and requested for him to set me up for a Mammogram. I went to the Mammogram which was on Feb 28th and notice they kept coming in and wanting more ex-rays of my right breast." The one I felt the knot in." At that time I knew there was something wrong. I was then told to get dressed and I needed to talk with the nurse. They walked me into Nurse Kelly and I remember her asking me if I had anyone there with me, I told her no. That's a day that I will never forget. She than looked at me and told me it wasn't good. That they spotted out a couple knots that she wanted to get a hold of the surgeon right away. She then came back into the room and told me that Surgeon Shannon Davis would be there right away if I could wait...They wasted no time. As soon as surgeon Davis arrived there they started working on me ASAP. Afterwards Nurse Kelly than gave me her house number as well as her cell and told me if I needed anything or anyone to please feel free to call her. Surgeon Davis grabbed my face and told me that she was going to do everything she could do to save my life.

If it wasn't for people like you supporting people like me without no insurance I probably would've been sent out the door that day wondering how I was going to save my life without treatment. You are a blessing from God up above and without supporters like you all you others and Surgeon Davis I probably wouldn't have much time left in this world. But thanks to all of you I am here today and as of now I am cancer free. I may have lost both breasts on April 1st but I'm still alive and feeling well. Surgeon Davis done such a wonderful job and made me grateful for the way I look today. Thanks to all of you and each and every one will forever be in my heart. I feel in my heart God allowed this to happen to me so that I can try my best to get the word out there. And if I could go all over the world screaming out to these women how important it is to stay update on your mammograms I would. I know most women are not aware that one of every eight women that you look at least one of them has breast cancer. That's unbelievable to me but trust me it's so true. One of eight, that's a lot! I will tell them not to say you didn't have the money or couldn't find the time because it could cost your life. Breast Cancer has come a long ways and there's foundations out there willing to help. So that's why I would like to thank each and every one of you who helps people like us. I was Honor to do a speech for the Susan Komen Organization and will have the Honor to go on Fox 19 News on May 17th to try my very best to get the word out there on how important it is to stay updated on your screenings and that it doesn't take money anymore to be able to get yourself a mammogram that there's people out there such as the Susan Komen Organization that offer free Mammograms. So hope me lots of luck on getting the word out there to others. People like you who are trying to help people like us will forever be in my heart and I'm sure in many others as well.. Thanks Diane Offill.
