General & Special Trade Construction Services

DEMOLITION SERVICES

It's not unusual that more skill and care be required to disassemble construction than to build it. Handon provides carefully planned interior and exterior demolition services including removal of reinforced concrete walls, partitions, ceilings and floors, ductwork, and electrical and mechanical systems.

COMMERCIAL DIVING SERVICES

Handon began and still performs as a commercial diving contractor, offering maintenance and repair, sub-structure inspection, salvage, and underwater diving services throughout the east coast of the U.S.

CONCRETE RESTORATION

Over time, concrete erodes and suffers damage from various environmental sources, accidental damage and the ravages of time. Handon provides both underwater and land-based concrete restoration services, including concrete repair, waterproofing, epoxy injection, and chemical and cement grouting.

MECHANICAL & ELECTRICAL SERVICES

This increased demand has been impetus for Handon Services to diversify beyond its traditional commercial diving, welding, demolition, and concrete restoration services into a broader range of general construction work, including mechanical and electrical services.

UNDERWATER CONSTRUCTION SERVICES

Underwater construction is a highly specialized category of construction services that requires highly trained and experienced management and staff who understand the specific safety, sanitation, and cost issues related to building, repairing, and inspecting underwater structures. Handon routinely provides underwater construction services including pipeline and submarine cable installation; gate, stop log, and valve installation; stem and valve repairs; traveling water screen repairs; and pile wrapping.

WELDING

Welding is the most common way of permanently joining metal parts. Heat is applied to the pieces to be joined, melting and fusing them to form a permanent bond. Because of its strength, welding is used to construct and repair parts of ships, automobiles, spacecraft, and thousands of other manufactured products. Welding is used to join beams when constructing buildings, bridges, and other structures, and pipes in nuclear power plants and refineries. Handon provides both topside and underwater welding services, including metal welding for stairs, railings, steps, and fences; structural steel welding for construction framing; steel cutting; underwater welding for dock and pier construction and reconstruction.
