

KN95 Mask Tips

Proper Use:

- New KN95 masks are folded. Unfold the mask and carefully flatten the metal nose clip. This step is not necessary when reusing your mask.
- Adjust the metal nose clip using fingers from both hands to mold the clip to the shape of your nose.
- Adjust fit as necessary to create a seal against your face.

Care and Storage :

- DO NOT attempt to wash or sanitize your KN95 with any type of chemicals. With proper care, your KN95 should be reusable for an extended period of time.
- CDC recommends not reusing more than 5 times or if mask is soiled/damaged.
- To keep your KN95 clean between uses, store your mask in a safe location that other people cannot access and where it will not get wet or subjected to excessive heat. A dry paper bag works well for storing your KN95.

When to Discard your KN95 Mask:

- It becomes soiled
- It no longer covers the nose and mouth
- It has stretched out or damaged ties or straps
- It cannot stay on the face
- It has holes or tears in the fabric
