

The First Laws of Organic Languages

- Organic languages are communications generated by human bodies. Artificial languages are communications generated by machines called computers.

1. Understanding How Words Work

A word is a symbol or group of symbols with an attached bundle of associations and those associations are a product of the Source's culture, time period, geographical location, and personal experiences.

- The symbols are the letters of the alphabet and other symbols linked to punctuation.
- The Source is the one who wrote or spoke the words.
- The Bundle of Associations create the meanings of words.
- Culture is a very complex Operating System Belief Structure.
 - ◇ *It begins with **DNA**, **Belief Models**, and **Technologies** of any human collective that is **passed on from generation to generation**.*
 - ◇ *Belief Model include knowledge, morals, laws, religion, customs, concepts, habits, skills, institutions, and any other capabilities **of a given people in a given period**.*
 - ◇ *It is more than a set of rules to guide behavior; it is a **comprehensive worldview** and **way of relating to one's fellow human beings**.*
 - ◇ *Complex cultures do not spell everything out literally, **they leave much to inference**.*
 - ◇ *A culture's strength lies not only in **what it says**, but also in **what it chooses not to say**, and this too must be learned.*
- Time Period (begins with conception and ends with death) and Geographical Locations of Source at the time of communicating.
- Personal Experiences are placed on a timeline that includes locations.

2. Examine the Context as well as the Content.

- A word must be examined in light of the sentence in which it is used. The sentence must be examined in light of the paragraph, etc.
- Context is defined as the parts of a discourse that surround a word or passage and can throw light on its meaning.
- Context can also be defined as the interrelated conditions in which something exists or occurs – environment.
- Content is the substance or gist. A part, element, or complex of parts also describes content.

3. Guard Against Ethnocentrism!

- Ethnocentrism is the belief that one's own group, race, society and culture is good, normal, right and superior to other groups, other races, other societies, and other cultures.
- It is a historical fact that everywhere humans have displayed their own interests, value systems, cultural patterns and normative orders as right, normal, and superior to others.
- We cannot possibly understand the words or actions of other groups if we analyze them in terms of our motives and values.
- We must interpret their words and behaviors in light of their motives, habits and values if we are to understand them.
- We are usually quick to recognize ethnocentrism in others and slow to see it in ourselves.

BHC Tov Life 1st Education Network

If you use all of the above Laws of Organic Languages without a partner or team (3 to 7) you will elevate your Exploring the Bible and Exploring Biblical Heritage Skills to higher levels. But BHC's ultimate goal is to elevate your Exploring Belief System Skills, to the level where you are able to identify the Belief Models that your own brain is using to make decisions.

- The brain functions on two levels – subconscious and conscious.
- The subconscious level interprets and responds to over 40 million nerve impulses per second.
- The conscious level processes about 40 nerve impulses per second.
- As an information processor the subconscious function is one million times more powerful than the conscious --and it contributes 95% of cognitive activity.

In order for Exploring Skills to accomplish this, **an open safe environment must be created** in which **participants are willing to have honest discussions** – and **every voice** must be heard. We use The BHC Primary Guideline to do this.

The BHC Primary Guideline

*My belief system will be large enough for all facts,
open enough to be examined and questioned,
and flexible enough to change if errors or new facts are discovered.*

- Each participant agrees to include all facts in his or her belief system.
- Each participant grants permission for other participants to examine and question his or her belief system.
- Each participant is committed to changing his or her belief system if errors or new facts are discovered.
- Only those who agree to follow this Guideline are allowed to participate in discussions. Visitors may listen to discussions if all participants agree.

BHC will provide Exploring assistance in multiple forms.

BHC Tov Life 1st Education Network
Protecting Brains from Weaponized
Artificial Machine Generated Information

Today Americans are living in **Toxic Cyberspace “Natureless” Infospheres** generated by the most powerful computers that are writing and updating their own programs. Their complexity has reached far beyond individuals to under. Their information is coming from “Big Data” and “User Profile” purchased from markets of social media and other internet providers. This means the “weaponized information” used against you – or your children – were created from information provided by users as AI Stalkers watch them.

*They know and target the user's appetites, desires,
longings, cravings, addictions, and fears.*

Strengthening Tov Life 1st Belief Models

Memories are stored in neural circuits of the brain, and they usually never go away. They just become dimmer and weaker. Memories are linked to Belief Models that the brain uses to screen incoming information and respond to it. The most trusted Belief Models are linked to stronger and brighter memories. Below are things we can do to strengthen or weaken memories and their Belief Models,

- Do things that are linked to understanding nature. These Belief Models will increase the brain's ability to distinguish between healthy incoming information and artificial/weaponized information.
- Do things that are linked to increasing skills linked to Tov Life 1st Values. This adds another layer of protection to the screening process of the brain.
- Network with others who share Nature and Tov Life 1st Belief Models. Create steady streams of memory enhancing and strengthening information.
- Learn how to ride your elephant.

How to Ride Your Elephant

Do you know the roles the *subconscious function* of your brain plays in processing information? It is absolutely essential that you become aware of what it does.

The brain functions on two levels – *subconscious* and *conscious*.

The *subconscious level* interprets and responds to over 40 million nerve impulses per second.

The *conscious level* processes about 40 nerve impulses per second.

As an information processor the subconscious function is one million times more powerful than the conscious --and it contributes 95% of cognitive activity.

Think of the relationship of the *conscious function* to *subconscious function* as that of a *rider* to an *elephant*. The rider will go wherever the elephant wants to go -- *unless the rider learns how to coax it to go somewhere else. It is essential to learn those skills and it takes a team to help.*

The brain's most important mission is survival and most of that activity takes place at the *subconscious level*. The elephant devotes lots of time and energy to *predicting what will happen next*, so that the body will be ready for any contingency. Every moment it is issuing thousands of predictions at a time -- *based on its past experiences*.

An important part of making predictions is based on the beliefs a person holds. The elephant is the guardian and protector of the most trusted beliefs.

1. It searches for information that confirm its belief models and experiences.
2. It distorts and molds new information to make it fit its preconceived concepts to confirm its belief models.

BHC Tov Life 1st Education Network

3. It filters out information that doesn't fit its preconceived concepts or confirm its belief models. It does this at the subconscious level with the rider being aware of it.

Think about that for a moment. This is why we encourage people to include people with different beliefs on their *Discussion Teams*. You may not be aware something your elephant is doing, but another team member may be able to see it clearly. This is why we have the second part of the team guideline – “*my belief system will be open enough to be examined and questioned.*” Every member gives others permission to do this. The rider and elephant are two parts of a biological process that we call the *biology of beliefs*.

- Stomachs process solids and liquids that enter it through the mouth.
- Brains process information that enters it through sensory organs – *eyes, ears, nose, tongue and skin.*
- Brains and stomachs are living organs that do what they are genetically hardwired to do.
- If you change things swallowed by a mouth, it could have profound effects on a person's life. And, if you change sensory information a brain process, it could also have profound effects on a person's life.

The biology of beliefs has not entered mainstream discussions about belief systems yet, but it soon will. We have no doubt that the biology of beliefs will ultimately be one of the most important discoveries in history – and BHC Tov Life 1st Families & Team members will be way ahead of the learning curve.
