

## **Youth At Risk Screening Questionnaire**

Mentor Research Institute

The following is a list of behaviors that are associated with Youth at Risk. Circle the items that describe the youth you are concerned about. Add the numbers up. A list of ranges are provided below. These ranges indicate a level of risk that your child's problem behavior will escalate without intervention. Professional consultation is always appropriate if you have concerns regarding mental, emotional or behavioral problems. This questionnaire should not be used to screen for medical, psychiatric or mental health disorders. No questionnaire can replace or substitute for professional consultation or face-to-face evaluation. This questionnaire is designed to help you clarify your concerns, help you discuss issues with a counselor or mental health professional and to give you an indicator of approximate risk.

Name: \_\_\_\_\_ Date Of Birth: \_\_\_\_\_ Sex: M F
