

Vaccine Schedule for Cats

This is an ideal vaccine schedule for pets participating in Poi Dogs and Popoki's Low Cost Wellness Program. This schedule will be altered for pets starting their vaccines at different ages or with medical requirements.

Poi Dogs and Popoki's Low Cost Wellness Program does not replace the need for your pet's yearly exam with a veterinary clinic.

<u>Date</u>	<u>Age</u>	<u>Schedule</u>
_____	8 weeks	FVRCP, Deworming, Revolution

_____	11-12 weeks	FVRCP, Revolution
-------	-------------	-------------------

Or

_____	11-12 weeks	* FVRCP, FELV, FELV/FIV test, Revolution
-------	-------------	--

_____	14-15 weeks	FVRCP, Revolution
-------	-------------	-------------------

or

_____	14-15 weeks	FVRCP, FELV, Revolution
-------	-------------	-------------------------

_____	1 Year +	Yearly vaccines and FeLV/FIV Test *, Continue Revolution monthly for life
-------	----------	---

- Kittens must be over 8 weeks of age to receive vaccines with PDP
- Rabies vaccination can be given after 16 weeks of age for pets on military installations or planning on traveling off island. (We do not offer Rabies Vaccines.)
- Heartworm prevention must be given monthly for life to prevent this fatal disease.
- Flea prevention is also important in Hawaii to prevent life threatening diseases in cats. Ideally you should give your cat monthly prevention to reduce the risk of your pet getting a disease or causing an infestation in your home.
- FeLV vaccine is not considered a core vaccine but is recommended in cats that are outdoor or indoor/outdoor or in homes that are going to foster pets
- Cats must be tested for FeLV before receiving their initial FeLV vaccine. If a kitten under the age of 16 weeks tests positive for FeLV or FIV, retesting after 6 months of age is recommended in case the positive is from maternal antibodies.
