

The original kitchen was OK at first glance. It needed a lot of work though.

Anabel's Favorite Gold Fan. Not.

Grease on Ceiling From No Hood

Not All Lights Worked

Cabinets Showed Wear

Needed New Appliances

New Counters Needed

Didn't like
the desk

Floors Needed Refinishing

Besides what is listed, we were not wild about the eat in counter that was there either. It made the space awkward.

The cabinet style was fine, but they were showing wear. The wood floors were in serious need of help.

This was not a total rip out. The layout of the kitchen was actually pretty good and the cabinets themselves were nice. They just needed refinishing.

So, we took out the appliances, counter tops, desk, fan, and took apart the cabinets. This takes a lot longer than what they show on home improvement shows. 😊

At this point:

- Cabinets painted and hardware added
- Counters installed
- Floors done
- Some appliances installed
- Walls painted

All Done!
