TIME OUT TRAILERS, INC. INTRODUCES ITS NEW TIME OUT DELUXE

Time Out Trailers, Inc. says it is proud to announce the release of a brand-new camper called the Time Out Deluxe.

Says Time Out: "For years, people have said we make the nicest camper on the market and the only request that people have made is for bigger wheels and to have more cargo space. The new Time Out Deluxe has accomplished both of these things. It comes with 12" wheels standard and has 23 cubic feet of cargo capacity inside.

Like our other campers, the Time Out Deluxe is completely off the ground and sets up in approximately 3 minutes. It comes standard with the table, chair and queen-sized air mattress, and a vent for an air conditioner is pre-sewn into the tent."

MSRP for base model is \$3,995. For more information, visit TimeOutTrailers.org or call to request a DVD and brochure at (800) 600-7671.

GENE'S GALLERY INTRODUCES ORANGE ELECTRONICS TPMS

Gene's Gallery says it would like to introduce its "TP Checker" (which includes new internal sensors) Tire Pressure Monitor System for tubeless tires.

Says Gene's Gallery: "The TP Checker monitors tire pressure and temperature every 3 seconds upon ignition and relays the information for display on the dashboard monitor (2.5" x 1.75" x .875") every 30 seconds. It notifies a rider of any abnormal shifts in tire pressure or temperature levels on the spot. Orange TPMS keeps the biker informed and allows him or her to react instantly [and can eliminate manual pre-ride pressure checks].

While motorcycle TPMS is not mandated (like for passenger vehicles) for North American motorcycles, Orange Electronic provides the high quality, low-cost alternative for those safety-conscious riders. The pressure and temperature information on the display unit will turn red and alert the rider if tire pressure or temperature shifts below the adjustable warning level in an individual tire, helping to prevent blowouts and slow tire leaks while optimizing performance.

It is designed for GL1500 and 1800 Gold Wings, VTX and Valkyrie two-wheeled motorcycles. The display requires a 12-volt power switch source and can be mounted anywhere you desire since it attaches with Velcro. It can be mounted without removal of a tire, but it is much easier with the tire dismounted."

Introductory pricing of \$179.99 with FREE Freight until March 1, 2012! To order, call (800) 728-GENE (4363) or visit genesgallery.com.

CHARLIE THOMPSON'S MOTORCYCLE PARK REVERSE WHEEL

Says Charlie Thompson: "I am the inventor of The Motorcycle Park Reverse Wheel (MCPRW). It is a unique system designed for Honda Gold Wing riders who desire the feeling of a two-wheeled motorcycle but the stabilization of a trike while parking or using reverse.

There is no system in today's market that compares to this one's sleek and stylish look. It was designed to satisfy the need for great looks and utility. The MCPRW enhances the look of all late-model Gold Wings and was engineered with reliability and simplicity as the primary features.

We chose to avoid the need for expensive electronic
