

MH-XL-Direct/Indirect Glass (DIG)

With HID Remote Ballast

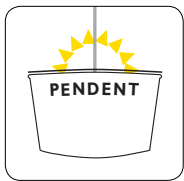

The **MH-XL-DIG** light disbursement from a HID light bulb is horizontal; this unique design reflects the light vertically at specific angles increasing illumination throughout the entire facility. The 92 percent translucent glass lens provides a soft non-glaring light, which reduces eyestrain while increasing visibility. Ideal for lighting retail, office, commercial and sports facilities with white ceiling heights from 15-50 feet.

Description

- Direct/Indirect Metal Halide Base up aluminum fixture with glass venting system pre-wired and assembled.
- Light disbursement 38% direct - 62% indirect.
