

HTV Emulator-1 Setup Guide for Samsung HGxxNT690U TVs

H-BROWSER CONFIGURATION INSTRUCTIONS*

*Not for Standalone, or H-Browser Custom Volume and Mute OSD installations.
 For these installations, see www.ProTVSolutions.com/htve-support.html for guides.

CUT PLASTIC HERE. DO NOT CUT OVER CABLES.

Installation of the HTV Emulator-1

1. Secure the HTV Emulator to the back of the TV using the Velcro dot. It can be located in the TV's connector inset just above the TV's product label, with the Pillow Speaker jack FACING DOWN
2. Plug the audio cable from the VARIABLE AUDIO IN jack to the TV's VARIABLE AUDIO OUT jack. **DO NOT PLUG THIS INTO THE HTV EMULATOR'S AUDIO IN JACK.**
3. Plug the flat cable from the DATA jack to the TV's DATA jack to control the TV's actions.
4. Plug in the nurse call or pillow speaker cable to the Pillow Speaker jack. This is a 3.5mm jack and might require adapter cables for the various types of nurse call system implementations that are available. See Page 2 for optional available cables.
5. Plug in the power cable from the PWR jack to the TV's USB port, to provide power the device.
6. IMPORTANT STEP - Secure the nurse call or pillow speaker cable to the TV with the included zip tie and anchor.

TV settings using the Samsung Hospitality Menu*

1. Turn the TV On. Using the remote control enter the TV's **Main Menu**.
2. Select SOUND and set the Sound Output to External speakers.
3. Enter the Configuration menu (MUTE, 1, 1, 9, SELECT)
4. Select the "Virtual Standby" option and turn it ON. This option allows the Internal USB power to be available when the TV is in standby.
5. Select the option "SI Vendor" and set it to "SSCP".
6. Enable H-Browser and follow integrators instructions to complete setup.
7. Select Bathroom Speaker, set
 SubAmp Mode = 2
 SubAmp Volume = 4
8. Installers may change other settings as necessary at this time.
9. Exit the factory menu by powering off the TV.

* See the Samsung TV Setup Guide on how to access the Hospitality Menu

Troubleshooting

NO CONTROL of TV – Confirm pillow speaker is setup for either Zenith or Samsung protocol. Instructions typically included with pillow speaker.

DISTORTED AUDIO - If the audio is distorted, confirm that the connection to the emulator is made to the VARIABLE AUDIO IN jack. Also confirm that the SubAmp Mode is set to 2, and that the SubAmp Volume is set to 4.

NO VOLUME OR MUTE INDICATOR - Volume and mute button presses are not visible on the TV screen as these parameters are being controlled outside the TV. You should still be able to hear the volume increasing, decreasing and muting even without the visual display.

TV WON'T TURN ON WITH PILLOW SPEAKER –Virtual Standby may not have been enabled in the Samsung Hospitality Menu. If it wasn't setup as the first item, then, it will be grayed out and you won't be able to confirm that it is on or off by looking at it. You can confirm that Virtual Standby is on, by looking to see if the SPDIF shows a red light when the TV is OFF. If not, Virtual Standby can be reenabled by resetting the TV and starting the TV setup process again.
