

JAMES WEBB SPACE TELESCOPE

1ST IMAGE ON 7-11 IN THE CONSTELLATION OF VOLANS

The purpose of this illustration is the 1st Deep Field Image from the James Webb Infrared Telescope. The Infrared Telescope was launched back on Christmas of 2021. The 1st Image was released to the World on July 11, 2022, a 7-11 Numerical Coefficient or perhaps a Code? The 1st Image was released ahead of its schedule disclosure along with the other 4 Images to be released on the 12th of July. Aside from a monumental Scientific Breakthrough, one will be commenting from a Biblical and Prophetic point of view, as one will see why. This illustration will show why one thinks this 7-11 Release Day and where and when the 1st Image was taken from, could be signaling the Typology of the Rapture Event as described in the Bible. Obviously, with over a \$10 Billion Dollar Prize Tag, NASA, held the Revealing Event in the White House. It has been reported that the James Webb Project has taken about 20 Years. The JWST Team's Original Plan was to reveal a total of the 5 Targets chosen on July 12, 2022. But the U.S. President decided to have NASA release 1 of the Targets a Day early. Which Target was that? SMACS 0723. And why would this be Biblically and perhaps Prophetically Significant? It was of the Galaxy Cluster found in the Star Constellation of Volans, the Flying Pisces or Fish. And? It is next to the Ark, Argo. If one studies the Message of the Mazzaroth or how the Storyline of the Constellations play their role, then it is messaging a Rapture Typology.
