PRESS RELEASE

Altura Advisors present Financing Green Infrastructure
Structured financing for renewables and capital projects.

Asheville, February 20, 2017: CASE Consultants International today announced that Phillip Horne of Altura Advisors will present **Financing Green Infrastructure**, Altura's unique and far-reaching funding opportunities for non-profit organizations, including for capital projects such as construction and renovation as well as green tech projects. The talk will take place on Saturday February 25th, **8:30-10:00 a.m.** at The Collider on 1 Haywood Street, in downtown Asheville, NC.

Altura Advisors finances projects for towns, counties, colleges/universities, hospitals and other non-profits. Categories include structured financing for renewables, carbon credits, capital projects (new and renovation) new markets, energy and green technologies. Such mechanisms as sale-leasebacks also play a significant role.

"The opportunity for public institutions and private enterprise to collaborate in the green economy is expansive and far-reaching," said Mr. Horne, "creating positive impact for the local and regional economies, for job creation and for new investment."

Altura's presentation is just one part of a symposium for regional town and county planners offered on February 24th and 25th. Hosted by CASE Consultants International, along with the American Planning Association and The Collider, the event, **Resilient Places: Planning for Our Future**, offers eight continuing education credits (CM) to registered participants. See <http://thecollider.org/events/event/resilient-place-planning-for-our-future/>.

"One of the most effective methods of both adapting to and mitigating climate change is green infrastructure," said Scott Shuford, Continuing Education Manager for CASE Consultants International. "Using natural systems makes a great deal of sense, but there is resistance because the technology is nontraditional. This is why our symposium is so fortunate to have an expert on financing green infrastructure

on our slate of speakers. Phillip Horne will share with us how to overcome these barriers through innovative financing methods. If the numbers work, local governments, developers and design professionals will be quick to adopt green infrastructure. This represents a win-win for all concerned."

For this free and open special presentation, please RSVP to Ms. Leah Donatelli at ldonatelli@thecollider.org or call [\(828\) 254-6283](tel:828-254-6283). We look forward to seeing you there. Mr. Horne will be available to speak to you after the presentation to field questions and identify opportunities for you and your team.

Headquartered in Asheville, NC, CASE Consultants International, a women-owned small business, leads in climate expertise, specializing in climate services.
