

Getting you back to
“Business as Usual”

Temperature Checking, Access Control,
Queue and Social Spacing Management

Getting you back to business

The Pandemic has severely disrupted “business as usual”. What do you need to get back up and running?

- Check that people do not have a high temperature when they come into your premises,
- People are wearing appropriate masks/face coverings,
- People are frequently hand sanitizing and being reminded,
- Are practicing safe distancing inside your premises,
- Maintain a running count in and out with detailed attendance recording,
- Provide signage promoting health awareness and encouragement,
- Adopt and embed the right processes to handle exceptions.

The SAFE Framework

01 Queue Management

1. At main entrances People Counting cameras check the numbers coming in and out
2. Digital signage shows allowed capacity, and the no of people inside
3. Options for targeted messaging and signage

Managing the numbers allowed into premises

Realtime temperature checks: < .05 secs

03 Sanitization

1. Person is prompted to sanitize their hands
2. The HandyPOS displays health awareness messaging and guidelines
3. Optional integration to Business Loyalty Programs

Sanitization & Health Promotion

Maintain "Safe Distancing"

04 Space Management

1. Thermal Imaging cameras track the people as they move through the premises
2. Any threshold/spacing breaches are alerted to staff leaders
3. Digital signage reminds customers of spacing requirements and local guidelines

05 Analytics

1. Realtime dashboards showing customer flows and trend patterns
2. Analytics tailored to provide you with focused information and insights to keep your business safe and profitable

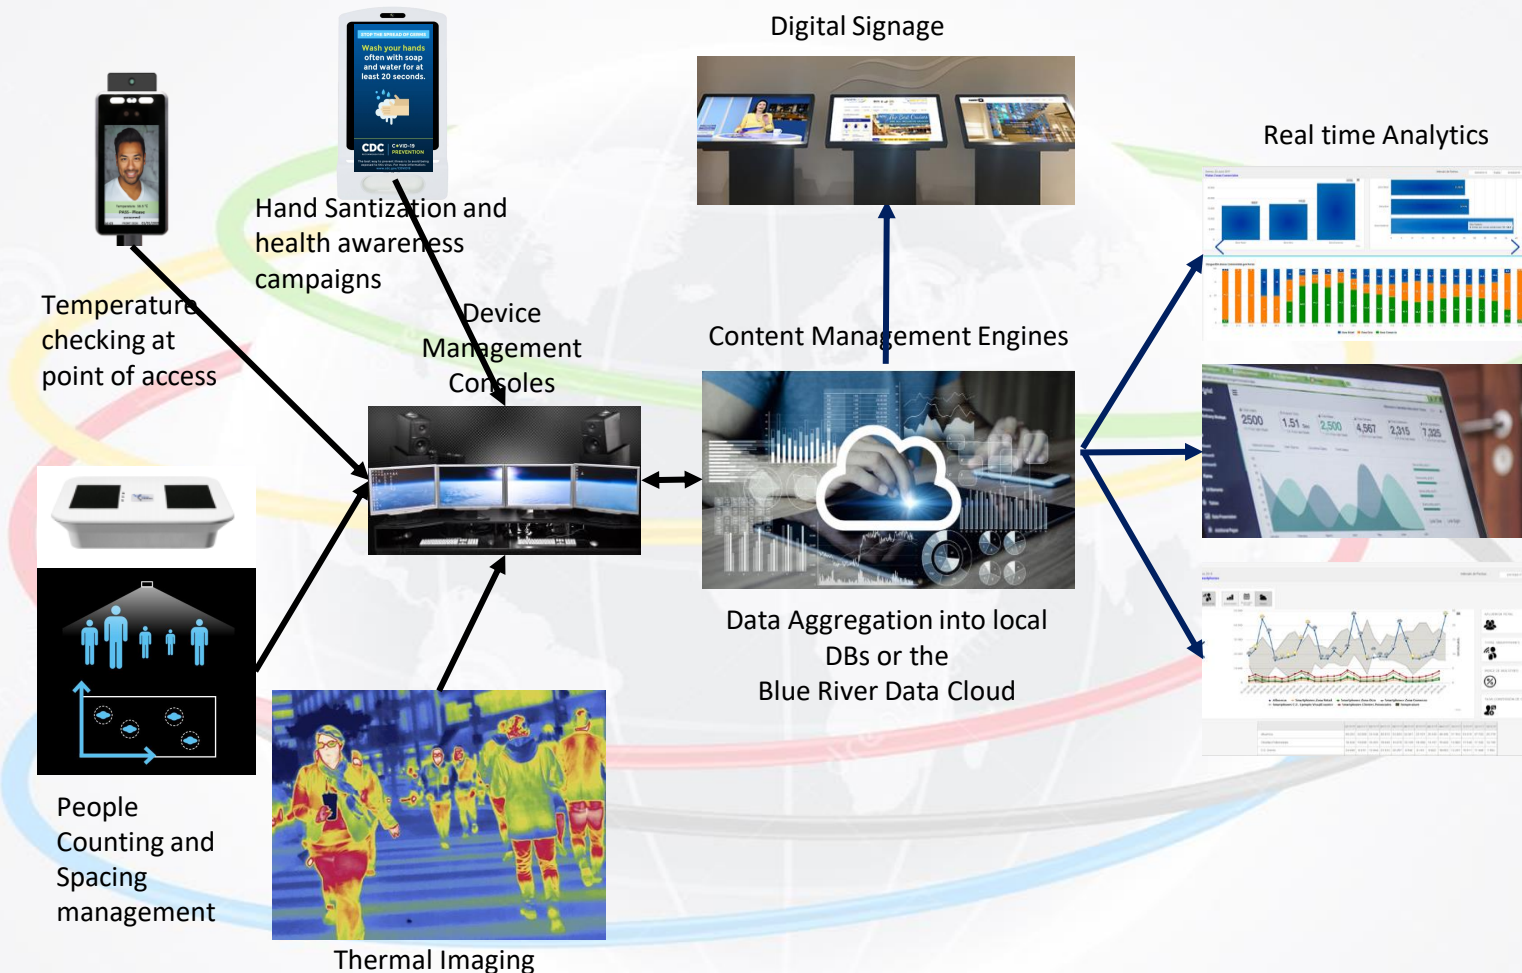

Data and intelligence to keep you in control

Getting your business back up and running

An Integrated Solution tailored for you

Key Outcomes

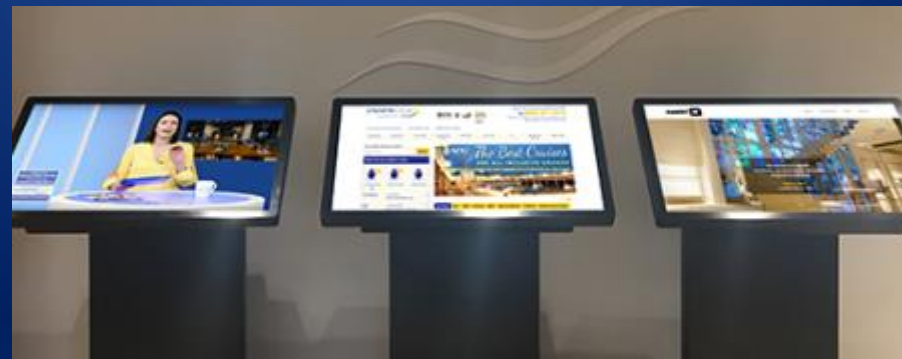

- Business is open and safety checks are in place
- Compliance with local regulatory requirements and bodies.
- Staff and visitors checked frequently for high temperature throughout the day,
- Frequent sanitizing of hands in business offices and facilities,
- Targeted messages and campaigns providing health and safety awareness and added reminders/encouragement,
- Realtime analytics to show trends and allow informed decision making

The Complete Solution

- Temperature checking and alerting
- Entry Access control
- Attendance recording and management
- Hand sanitization
- Digital signage
- Queue management
- Contact Tracking
- Analytics and reporting
- Integration into school/HR and health systems and processes

Contact Tracing Management

We're currently developing solutions for contact tracing using our AI platform. This enables administrations to tag and trace any flagged infected persons, tracing their contact with others within the deployed environment.

Coming Q4 2020

Our Approach

Key Activities

- Understand your critical requirements and standard people flow patterns
- Create your tailored proposal and Program Plan for pragmatic deployment of capabilities,
- Develop and activate governance and escalation framework, and communicate to stakeholders,
- Agree required reporting and analytics,
- Deploy capabilities and processes to meet targeted benefits and outcomes,
- Map people flow patterns to deployment architecture,
- Understand training needs, build plan, and deliver training
- Assess operational readiness and plan for handover into production.

Your strategic IT Partners

We are a group of seasoned IT professionals and consultants supporting you in:

- Achieving your IT objectives,
- Becoming and remaining compliant,
- Getting the best from what you have,
- Taking you on a journey to where you want to be,
- Guiding you with the best advice along the way.

We want you to be successful and safe

HandyCHECKPOINT™

Temperature Checking

The HandyCHECKPOINT™ provides peace of mind for educational institutions by detecting the temperature of each person, and then alerting both them and security/reception if exceptions are detected .

A high-resolution, non-contact AI thermal detector, automatically checks their temperature – within 5 milliseconds from distances of up to 4 feet - and alert any person with an elevated temperature to seek additional screening.

The HandyCHECKPOINT™ has the option for facial recognition and can also be set to detect if the user is wearing a mask/fave covering with on-screen and audio messages to reinforce public safety regulations.

This can be integrated using the supplied APIs with People Record Systems and the facial recognition capability can be used for tracking time attendance and enabling automated entry systems.

Blue River™

Blue River™ - HandyCHECKPOINT™

At each Check-In, the facial record count and temperature reading is passed to Datalink and on to MagicINFO, to trigger content on the display. This information is also passed to the other databases and once confirmed, access control activated

HandyCHECKPOINT™

- Temperature Check
- Mask Check
- Facial Recognition
- Time Attendance
- Access Control

Samsung Display

Access Gate

HandyPOS™

Hand Sanitizer & Signage Station

Hand washing has been encouraged by the health authorities as a way of safeguarding against infection.

- This "*Point of Sanitation*" protects against bacteria and virus's including COVID-19.
- Displays scheduled and managed content clearly on the large screen,
- Automatically senses the hand and dispenses the sanitizer without the need of physical touch.
- Cabinet houses a 21.5" LED Screen, 500cd brightness suitable for 24/7 operation.

As part of a COVID-19 strategy, this will give a clear statement of caring and wellbeing to both public, and staff alike, instilling confidence in safety for all.

Digital Display & Content Management System

Our digital signage solutions provide the ability to schedule and remotely update content over the network, either locally or via our cloud-based system.

Other features include;

- Integration of databases to show capacity numbers
- Control flow by triggered content at specific timed intervals
- Full content scheduling and remote monitoring of hardware

Access Control & Space Management

Using people counters, heat mapping and flow control products we're able to provide complete control for offices and venues within a single solution. Linked to data sources captured by multiple devices, our platform controls digital signage messaging and door access control systems such as gates and barriers.

Products;

- Heat mapping
- Access Control (Doors / Barriers / Gates)
- People Counting
- Capacity Control
- People Flow Control

Access Control & Space Management

Retail Store

• CCTV Cameras

This People Counter, Entry and Occupancy Management solution is easily achieved using our software and analytics linked via Datalink and MagicINFO

Blue River Solution

- Integrated with MagicINFO
- Uses IP based CCTV Cameras
- and/or USB Camera with Media Player
- Links to Analytics Engine
- Realtime Information passed via Datalink
- Trigger live information to displays to change content, such as STOP, or GO

Samsung Display

Privacy, Process & Crisis Management

- Employee and Administrative Training Process
- Arrival Process
- On Campus Process
- Crisis Management
 - Temperature/Symptoms
 - Campus Lockdown
- Contact Tracing
- Event Management (Sports, Gathering)
- Office/Administration Area
- Office Premises' Sanitizing
- Departure Process

Training and Adoption

Targeted Training which will include:

- Prevention Training (Health/Weigh/Diet/Digital Signage)
- Employee Training
- Management Training
- Administration Training
- Communication Planning and Targeting
- Online Video Training and Updates

Value Add

- **Student Reward Incentives**
- Integrating personal identifiers, such as RFID / NFC, we can create a rewards based system for schools.
- Example;
- Each time a person sanitizes using their unique identifier, this adds a score to their profile creating a gamification reward system.
