

# Dental Sleep Practice introduces the “DSP Patient Education Guide”

In the United States, there are an estimated 50-70 million adults with sleep or wakefulness disorders. These disorders do not effect just adults.

The CDC says that sleep or wakefulness disorders cause difficulty in concentration and memory. 4% of children including infants have sleep apnea which could lead to developmental issues if undiagnosed.

DSP Patient Education Guide is a 24-page education and marketing tool available for your patients. The content will provide information on sleep apnea and snoring.

Children 2-17 are 83% of the population spending time in dental chairs. DSP Patient Education Guide presents awareness on signs and symptoms in children.

- Available to brand with your office’s logo and information for distribution to your patients
- Only published once a year
- Ideal marketing tool fostering patient conversations leading to greater treatment acceptance or new treatment development
- Cost effective so you can provide to your patients at no cost
