

MANURE STORAGE STRUCTURE

The type of manure storage structure you would use depends upon your livestock operation, animal waste management system and planned field application. Several options exist including an earthen storage pond, above or below ground tank, pit underneath a confinement facility or a sheltered concrete slab area. Manure can be pumped, scraped and hauled, pushed or flushed into your storage structure. The structure's purpose is to safely contain the manure and keep nutrient loss and pollution of downstream water bodies to a minimum by preventing runoff.
