Re: **BOIL WATER ADVISORY**

Please be advised due to cautionary measures, a **Boil Water Advisory** is in immediate effect until further notice.

Attached is a helpful fact sheet to safely boiling water.

Thank you in advance for your cooperation.

Boil Water Advisory Fact Sheet

Whenever any kind of repair or construction on the water supply system either planned or an emergency, there is a risk of soil or other contaminants entering the water supply. Although this risk is very low, a Boil Water Advisory (BWA) is issued to all residents, businesses and public facilities located along that area of the water supply system.

Until further notice, it is advised that you boil water for any activity where water may be ingested. This includes;

- Drinking
- Brushing teeth
- Washing fruits and vegetables
- Drinking water from public drinking fountains in this area.

Please follow these instructions:

- Bring water to a rolling boil
- Continue to boil for at least 1 minute
- Let water cool before using

If you do not wish to boil your water, use an alternate water supply known to be safe (eg. bottled water).

This Boil Water Advisory will remain in effect until work on the system is complete and microbiological samples confirm the safety of the water. This is a localized problem, and only households and businesses in the affected area will receive this notice.

WHAT TO DO WHEN THE WATER RETURNS

When the water service is restored, we advise that you open each cold water tap, one at a time, and let them run for about 20 seconds each. This should release any air trapped in your water lines. If the water is cloudy or contains grit, continue to run the cold water taps until the water runs clear.
