Micro Weld Fitting

Features

- 316L VIM/VAR Material
- Permanently Heat code marked; traceable to original mill certificate of test.
- Electropolished components permanently marked with designator on cube (P or PX)
- Critical surfaces are 100% visually inspected using magnification and lighting.

Materials

- 316L VIM/VAR Material complies with ASTM A276 and ASME SA479. Recommended tubing specifications include ASME SA213, ASTM A213, ASTM A249, ASTM A269, MIL T8504, and MIL T8506.

Specifications

- **Pressure Ratings** will be governed by the tubing selected for a particular application. Working Pressures are calculated below for tubing using maximum allowable stress levels in accordance with ASME/ANSI B31.3, at ambient temperature.

Tube O.D.	Pressure Rating		Normal Wall Thickness
	psig	bar	
1/4in.	5100	350	.035in.
3/8in.	3300	220	.035in.
1/2in.	3500	240	.049in.
6mm	6600	460	1mm

- **Dimensions** are for reference only and are subject to change.

- **Internal Surface Finishes:** Standard finish Micro Fittings have an internal Surface Roughness of 10 μ inch Ra. Electropolished Micro Fittings have an internal Surface Roughness of 5 μ inch Ra.

Designator	Surface Finish(Ra)	
	Average	Maximum
BA	10 μ in.(0.25 μ m)	15 μ in.(0.38 μ m)
P	5 μ in.(0.13 μ m)	10 μ in.(0.25 μ m)
Px	4 μ in.(0.10 μ m)	7 μ in.(0.18 μ m)

Face Seal Fitting

- **High-Purity Nickel and Hastelloy C-22** glands for extremely corrosive applications.
- **Non-Rotational Female Nut** to prevent transmission of torque during make-up and therefore minimize twist of componentry which causes stress concentration.
- **Anti-Galling Female Nut** to ensure consistent make-up without plating or lubrication.

Materials

316L Stainless Steel Single Melt	SM	bar stock : ASME SA479, ASTM A276 forgings : ASTM A182
316L VAR(Vacuum Arc Remelt) Stainless Steel Double Melt	DM	bar stock : ASME SA479, ASTM A276 forgings : ASTM A182

Temperature Ratings

Fittings:
Stainless Steel 316, 316L, SM, DM
1000 °F(537°C)

Gaskets:
High-Purity Nickel 600 °F(315°C)
Stainless Steel 1000 °F(537°C)

- **Dimensions** are for reference only and are subject to change

- **Plating** female nuts are silver plated with an enhanced plating process. Avoid aggressive chemical processes used for cleaning, electropolishing and passivation that will remove plating. Removal or damage to plating will cause threads to gall, damaging fitting components and preventing a proper seal.

- **Testing** products are rated to a Helium leak rate of 1×10^{-9} atm cc/sec.

- **Internal Surface Finishes:** components are available with controlled surface finishes and electropolished internal surfaces.

- **Cleaning and Packaging:** Ultra-High Purity cleaning and packaging in a Class 100 Clean Room environment validated per Federal Standard 209E, is standard for all electropolished components.

Specifications

- **Pressure Ratings** are based upon tests conducted on assemblies. All ratings comply with calculations per ANSI Code for Pressure Piping B31.3.

- **Working Pressures** are rated at ambient temperature and are based on a 4 to 1 design factor. To determine pressure ratings in accordance with ANSI B31.1 multiply **Working Pressures** by 0.94.

Handling

Damage to the sealing beads may affect the fitting performance. A protective cap is placed on all Face Seal Fitting sealing beads to prevent nicks or scratches. Keep this cap in place during storage and handling and only remove prior to assembly.

Retainer Assembly

Step 1

When using a gasket retainer assembly, axially press the assembly onto the gland as shown. The retainer assembly will locate the gasket over the bead and hold it in place. Be careful not to scratch or nick the bead as this may affect fitting performance.

Proceed to Step 2

Non - Retainer Assembly

Step 1
Place gasket into female nut.

Step 3
Scribe the hex flat of both the male and female

Step 2
Assemble components and snug to fingertight.

Step 4
Holding the backup wrench stationary, tighten the female nut 1/8 turn past fingertight. **Warning:** Extreme over tightening will damage toroid surface and cause potential leakage.

Protective Cap

Removing Face Seal in an assembled system requires minimal clearance. To disassemble a face seal connection, hold the male nut or body hex stationary with a backup wrench and loosen the female nut. After removing the components, be sure to protect the sealing beads with protective caps or gasket retainer assemblies.
