FIGHTING HEREDITARY CANCER

HBOC syndrome is caused by inherited gene mutations that create a high risk of **BREAST**, **OVARIAN** and **PROSTATE** cancer in carriers

Hereditary cancer is diagnosed far more often in affected families, at younger ages and tends to be more aggressive

A shocking 3-5 times more people are affected by the **RISKY GENES** that cause HBOC syndrome than multiple sclerosis

Prevention options can reduce cancer risk up to 95%

Yet, awareness remains so low that most **RISKY GENE** carriers don't yet know it, so can't take advantage of the medical recommendations in place to save their lives

Do you carry **RISKY GENES**, or know someone that does?
