GDP SHRINKS AT REVISED -0.6% IN Q2 AS ECONOMY REMAINED IN RECESSION

The U.S. economy shrank at slightly slower pace in the second quarter than previously reported, but continued to meet the criteria for a so-called technical recession as raging inflation and higher interest rates weighed on spending.

Gross domestic product (GDP), the broadest measure of goods and services produced across the economy, shrank by 0.6% on an annualized basis in the second quarter, the Commerce Department said in its second reading of the data on Thursday. That is below the initially reported 0.9% decline.

The improvement stemmed from better data on consumer spending, boosting inflation-adjusted outlays by 1.5% in the spring instead of 1% as initially reported. Household spending accounts for about 70% of the economy and is the main engine of U.S. growth.

What's more, businesses increased profits again after a decline in earnings in the first quarter. Adjusted pretax corporate profits rose 6.1% in the second quarter, suggesting there's little pressure on companies to lay off workers or slash investment.

The nation's GDP already contracted by 1.6% in the period from January to March, the worst performance since the spring of 2020, when the economy was deep in the throes of the COVID-induced recession.

STRATEGICALLY FOR CREDIT UNIONS

The latest downturn stems from a number of factors, including declines in private inventories, residential and nonresidential investment, and government spending at the federal, state and local levels. Those decreases were offset by increases in net exports — the difference between what the U.S. exports and what it imports — as well as consumer spending, which accounts for two-thirds of GDP.

The NBER has also stressed that it relies on more data than GDP in determining whether there is a recession, such as unemployment and consumer spending, which remained strong in the first six months of the year. It also takes into consideration the depth of any decline in economic activity.

Thus, real GDP could decline by relatively small amounts in two consecutive quarters without warranting the determination that a peak had occurred.

Central bank policymakers raised the benchmark interest rate by 75 basis points in June and July for the first time since 1994. They signaled that another increase of that magnitude is possible in September, depending on forthcoming economic data.

Overall, this fits with our assessment that the U.S. economy is headed for a sharp slowdown in 2022, but stability in consumer spending will help avoid a deep and prolonged contraction of the economy.
