

Dr. Sanders is an amazing physician and diagnosed my problem immediately. I had been dizzy for 6+ months when I was referred to Dr. Sanders' office. My symptoms included a continual headache and bouts of dizziness several times an hour. It was not the kind of dizziness where the room spins; rather, it was more like the kind of dizziness that you get when you stand up too fast. I would have the dizziness and lose my balance, especially when I looked up or down, or if I moved my head left to right. I felt nauseous all the time, as I was never one to jump on the merry-go-round or hop on the Teacup ride at the fair, and it was difficult to care for my newborn and three other boys. Dr. Sanders diagnosed me with a Vestibular Migraine and prescribed medication. Not one to take meds, he started me on a very low dose and gradually increased the dose until my dizziness was under control. I appreciated that he kept my dose low. I spent a few years coping with more symptoms than I would have because I didn't want to take medication. I finally accepted the reality of my condition and increased the dosage to a point that made my life very near normal. I should have just gone with a higher dose to begin with, but Dr. Sanders was very kind and respected my concerns. Dr. Sanders and his staff are very caring and provide a wonderful service!
