

HIPAA Compliance Remediation Services

Risk Management After A Security Breach

Compliance with the **Health Insurance Portability and Accountability Act (HIPAA)** in the healthcare environment involves taking actions to address the privacy and security of **Protected Health Information (PHI)** and documenting those specific actions as required by the regulations. If a security breach or data loss occurs, specific steps need to be taken.

HIPAA Solutions, LC offers consulting, and remediation services to assist in addressing compliance breaches and errors. If an organization experiences a security or privacy breach involving PHI, it is critical that legally required mitigation actions be taken immediately.

Remediation can include all or some of the steps outlined below, depending on the client's requirements. Additional actions not listed below may be needed in some circumstances.

Remediation Services

Breach containment and identification of options for immediate recovery, including an assessment of the breach

Analysis of notification requirements for all parties involved

Options explored, taken and documented relating to data recovery

An overall compliance assessment, if required, of the organization relating to the breach

Remediation steps and actions implemented to prevent additional breaches based on the organizational assessment of compliance

A sanctions analysis will be provided

Separate analysis provided outlining in detail the level of risk exposure to the organization

Specific training available for prevention of future breaches

Identification of steps to be taken related to the organization's business processes

Technical consulting and development resource to ensure in-house applications are HIPAA compliant.

IS YOUR ORGANIZATION COMPLIANT WITH HIPAA?

How do you ensure that you are complying with the Privacy and Security rules of HIPAA?

Did you do an in depth audit of the organization and apply the minimum necessary rule to job functions?

What type of documentation do you keep on your compliance activities in the event of an audit?

How do you manage the accounting of disclosures for transactions involving PHI?

In the event of a government audit, how would you be able to quickly provide any required information?
