SAN FRANCISCO COBBLESTONE

Interlocking Paving Stones

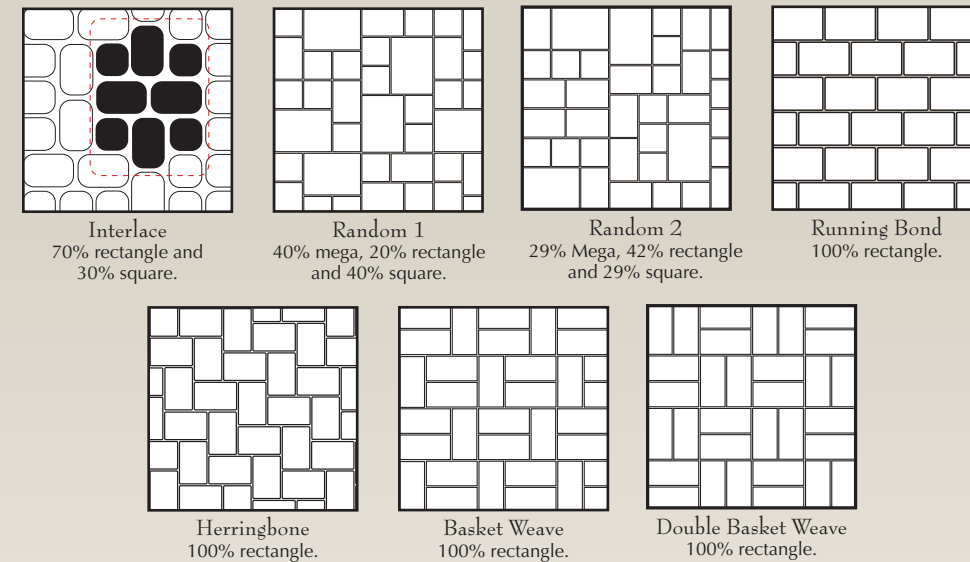

For your hardscape designs that require more formal styling, these pavers offer the traditional look and feel of centuries-old cobbled block. In Renaissance colors, the collection will also provide you with the opportunity to design complementary walls and stairways to complete your personal statement.

Typical Paver Installation *

1. Excavate unsuitable, unstable or unconsolidated subgrade material and compact the area which has been cleared. Backfill and level with dense graded aggregate suitable for base material (typically 3" - 6" for pedestrian/light vehicular traffic and 8" - 10" for driveway applications), or as otherwise directed by site engineer/architect/landscape architect.
2. Install edge restraint using concrete curb, concrete toe or edging.
3. Place bedding course of sharp normal weight screening or concrete sand to a uniform depth of approximately 1" leveled to grade.
4. Install Basalite Pavers hand tight with joints approximately 1/8". Where required, cut stones with an approved cutter to fit accurately.
5. Tamp pavers with mechanical vibrator, uniformly level true to grade and free of movement.
6. Fill voids in joints by sweeping, dry, fine, sharp sand over pavers.

*The installation instructions and illustrations shown are a basic overview of paver installation methods. Because of the variety of applications, please refer to the Basalite® installation guide, or visit us online at basalite.com.
