

For several years I have suffered with severe headaches. I also have had many vertigo attacks. I felt like I had a helmet on my head with fuzzy feeling. My physician sent me for MRI and it showed no problems. Finally, he sent me to a local neurologist who then sent me to Dr. Sanders. He put me through several tests and then to Michelle for the hearing test and found no inner ear problems. I did have a hearing problem which was solved with aids.

It was then that Dr. Sanders told me my problem was migraine headaches. He prescribed amitriptyline which absolutely solved the headaches and vertigo problems.

I have experienced absolutely "NO PROBLEMS" since then. It has been three months and I feel GREAT and also can hear so much better. Thank you BalanceMD!
