Basics & Fundamentals of Computer

Computer: A **computer** is a truly amazing machine that performs a specified sequence of operations as per the set of instructions (known as **programs**) given on a set of data (**input**) to generate desired information (**output**).

A complete computer system consists of four parts:

- ✓ **Hardware:** Hardware represents the physical and tangible components of the computer.
- ✓ **Software:** Software is a set of electronic instructions consisting of complex codes (Programs) that make the computer perform tasks.
- ✓ **User:** The computer operators are known as users.
- ✓ **Data:** Consists of raw facts, which the computer stores and reads in the form of numbers.

The following features characterize this electronic machine:

- ✓ Speed
- ✓ Accuracy
- ✓ Storage and Retrieval
- ✓ Repeated Processing Capabilities
- ✓ Reliability
- ✓ Flexibility
- ✓ Low cost

Computer hardware consists of the following components:

1. **CPU (Central Processing Unit):** CPU is considered as the brain of the computer. It performs all types of data processing operations, stores data, intermediate results and instructions (program). It controls the operation of all parts of computer.

Fig: The relationship between different hardware components

[A] CPU itself has following three components:

- ✓ **ALU (Arithmetic Logic Unit):** When the control unit encounters an instruction that involves mathematical calculation or decision/logic, it passes the control to the second component, i.e., the arithmetic logic unit (ALU). The ALU includes a group of registers - memory locations built directly into the CPU - that are used to hold data that are being processed by the current instruction.
- ✓ **Registers:** The register is the smallest high-speed storage area in the CPU. All data must be represented in a register before it can be processed.

- ✓ **Control Unit:** This unit controls the operations of all parts of computer but does not carry out any actual data processing operations

[B] Primary memory consists of mainly two types of memories:

- ✓ **Random Access Memory (RAM):** RAM is the internal memory of the CPU for storing data, program and program result. It is read/write memory which stores data until the machine is working. As soon as the machine is switched off, data is erased.
- ✓ **RAM is volatile**, i.e. data stored in it is lost when we switch off the computer or if there is a power failure. Hence a backup uninterruptible power system (UPS) is often used with computers. RAM is small, both in terms of its physical size and in the amount of data it can hold.
- ✓ **Static Random Access Memory (SRAM):** A type of memory that is faster and less volatile than DRAM, but requires more power and is more expensive. The term static is derived from the fact that it does not need to be refreshed like DRAM.
- ✓ **Synchronous Dynamic Random Access Memory (SDRAM):** A type of DRAM that can run at much higher clock speeds.
- ✓ **Read Only Memory (ROM):** The memory from which we can only read but can not write on it. This type of memory is **non-volatile**. The information is stored permanently in such memories during manufacture. A ROM, stores such instructions that are required to start a computer. This operation is referred to as bootstrap.

There are mainly three types of RAM available:

- ✓ **Dynamic Random Access Memory (DRAM):** A type of physical memory used in most personal computers. The term dynamic indicates that the memory must be constantly refreshed (reenergized) or it loses its contents. This type of memory is more economical.

There are mainly three types of ROM available:

- ✓ **MROM (Masked ROM):** The very first ROMs were hard-wired devices that contained a pre-programmed set of data or instructions. These kinds of ROMs are known as masked ROMs which are inexpensive.
- ✓ **PROM (Programmable Read only Memory):** PROM is read-only memory that can be modified only once by a user. The user buys a blank PROM and enters the desired contents using a PROM program
- ✓ **EPROM (Erasable and Programmable Read Only Memory):** The EPROM can be erased by exposing it to ultra-violet light for a duration of up to 40 minutes. Usually, an EPROM eraser achieves this function.
- ✓ **EEPROM (Electrically Erasable and Programmable Read Only Memory):** The EEPROM is programmed and erased electrically. It can be erased and reprogrammed about ten thousand times. Both erasing and programming take about 4 to 10 ms (milli second).

Memory

A memory is just like a human brain. It is used to store data and instructions. Computer memory is the storage space in computer where data is to be processed and instructions required for processing are stored. The memory is divided into large number of small parts called cells. Each location or cell has a unique address which varies from zero to memory size minus one.

Memory is primarily of three types

- **Cache Memory:** It is a very high speed semiconductor memory which can speed up CPU. It acts as a buffer between the CPU and main memory.
 - **Primary Memory/Main Memory:** Primary memory holds only those data and instructions on which computer is currently working. It has limited capacity and data is lost when power is switched off.
 - **Secondary Memory:** This type of memory is also known as external memory or non-volatile. It is slower than main memory. These are used for storing data/Information permanently.
2. **Secondary Storage (External Storage Devices) :** Floppy diskettes, hard disk, tapes and optical disks come under the category of external storage devices or ancillary storage devices. These devices are very sensitive to environmental conditions (humidity and temperature) as well as to external magnetic fields and need to be stored carefully.
- ✓ **Floppy Disk :** Floppy disks are primarily used on PCs. Information on a floppy disk is recorded in the magnetized states of particles of iron oxides evenly placed upon concentric circles known as tracks.
 - ✓ **Hard Disk:** It is a non-removable enclosed magnetic disk included in most PCs. It contains a stack of metal platters, each coated with iron oxide, that spin on a spindle and the entire unit is encased in a sealed chamber.

- ✓ **Magnetic Tape:** This is plastic tape, usually made of Mylar that is coated with iron oxide, thereby enabling the introduction (writing); retention (memory) and reading of magnetically recorded information. The best use of tape storage is for data that you do not use very often.

3. **Peripherals:** Peripheral devices are devices connected to the computer externally. If a peripheral device is disconnected, the computer will still be able to work; only functions performed by this peripheral device will not be available.

Mainly there are following types of peripheral devices:

1. **Input Devices (How to tell it what to do):** This unit makes link between user and computer. The input devices translate the information into the form understandable by computer.

- **Keyboard-** The most common and very popular input device which helps in inputting data to the computer
- **Mouse-** Mouse is the most popular pointing device and cursor-control device having a small palm size box with a round ball at its base which senses the movement of mouse and sends corresponding signals to CPU when the mouse buttons are pressed.
- **Joy Stick-** To move cursor position on a monitor screen. It is mainly used in Computer Aided Designing (CAD) and playing computer games.
- **Light pen-** It is used to select a displayed menu item or draw pictures on the monitor screen.
- **Track Ball-** Mostly used in notebook or laptop computer, instead of a mouse. This is a ball which is half inserted and by moving fingers on ball, pointer can be moved
- **Scanner-** A scanner allows you to scan printed material and convert it into a file format that may be used within the PC.
- **Digitizer-** It converts analog information into digital form.
- **Microphone-** Microphone is an input device to input sound that is then stored in digital form.
- **Magnetic Ink Card Reader (MICR)-** MICR input device is generally used in banks because of a large number of check to be processed every day.
- **Optical Character Reader (OCR)-** OCR scans text optically character by character, converts them into a machine readable code and stores the text on the system memory.
- **Bar Code Reader-** A device used for reading bar coded data (data in form of light and dark lines). Bar coded data is generally used in labeling goods, numbering the books.
- **Optical Mark Reader (OMR)-** A special type of optical scanner used to recognize the type of mark **made** by pen or pencil.

2. **Output Devices: (How it shows you what it is doing)** Output devices translate the computer's output into the form understandable by users.

Monitors: Monitors, commonly called as Visual Display Unit (VDU), are the main output device of a computer. It forms images from tiny dots, called pixels that are arranged in a rectangular form. The sharpness of the image depends upon the number of pixels.

There are two kinds of viewing screen used for monitors.

- **Cathode-Ray Tube (CRT):** The CRT display is made up of small picture elements called pixels. The smaller the pixels, the better the image clarity, or resolution
- **Flat- Panel Display:** The flat-panel display refers to a class of video devices that have reduced volume, weight and power requirement in comparison to the CRT.

Printer: Printer is an output device, which is used to print information on paper.

- **Impact Printers:** The impact printers print the characters by striking them on the ribbon which is then pressed on the paper.
- **Non-Impact Printers:** Non-impact printers print the characters without using ribbon. These printers print a complete page at a time so they are also called as Page Printers. Laser Printers, Inkjet Printers.

Note:

- ✓ **Data:** Data can be defined as a representation of facts, concepts or instructions in a formalized manner which should be suitable for communication, interpretation, or processing by human or electronic machine.
- ✓ **Information:-** Information is organized or classified data which has some meaningful values for the receiver. Information is the processed data on which decisions and actions are based.
- ✓ **Data Processing Cycle:** Data processing is the re-structuring or re-ordering of data by people or machine to increase their usefulness and add values for particular purpose. Data processing consists of basic steps input, processing and output.

These three steps constitute the data processing cycle.

- ✓ **Input** - Input data is prepared in some convenient form for processing. The form will depend on the processing machine. For example, when electronic computers are used, the input data could be recorded on any one of several types of input medium, such as magnetic disks, tapes and so on.
- ✓ **Processing** - In this step input data is changed to produce data in a more useful form. For example, paychecks may be calculated from the time cards, or a summary of sales for the month may be calculated from the sales orders.
- ✓ **Output** - The result of the proceeding processing step are collected. The particular form of the output data depends on the use of the data. For example, output data may be pay-checks for employees.

Language Processors:

- ✓ **Assembler:** This language processor converts the program written in assembly language into machine language.
- ✓ **Interpreter:** This language processor converts a HLL(High Level Language) program into machine language by converting and executing it line by line.
- ✓ **Compiler:-**It also converts the HLL program into machine language but the conversion manner is different. It converts the entire HLL program in one go, and reports all the errors of the program along with the line numbers.

Classification of Computers:

Computers can be broadly classified by their speed and computing power:

Sr. No.	Type	Specifications
1	PC (Personal Computer)	It is a single user computer system having moderately powerful microprocessor.
2	WorkStation	It is also a single user computer system which is similar to personal computer but have more powerful microprocessor.
3	Mini Computer	It is a multi-user computer system which is capable of supporting hundreds of users simultaneously. Software technology is different from minicomputer.
4	Main Frame	It is a multi-user computer system which is capable of supporting hundreds of users simultaneously. Software technology is different from minicomputer.
5	Supercomputer	It is an extremely fast computer which can execute hundreds of millions of instructions per second.

Following are the main memory storage units:

S.No.	Unit	Description
1	Bit(Binary Digit)	A binary digit is logical 0 and 1 representing a passive or an active state of a component in an electric circuit.
2	Nibble	A group of 4 bits is called nibble .
3	Byte	A group of 8 bits is called byte . A byte is the smallest unit which can represent a data item or a character. (1 byte = 8 bits)
4	Word	A computer word, like a byte, is a group of fixed number of bits processed as a unit which varies from computer to computer but is fixed for each computer. The length of a computer word is called word-size or word length and it may be as small as 8 bits or may be as long as 96 bits. A computer stores the information in the form of computer words.

Few higher storage units are following:

S.No.	Unit	Description
1	Kilobyte (KB)	1 KB = 1024 Bytes
2	Megabyte(MB)	1 MB = 1024 KB
3	GigaByte (GB)	1 GB = 1024 MB
4	TeraByte (TB)	1 TB = 1024 GB
5.	PetaByte (PB)	1 PB = 1024 TB

Software

Software: software represents the set of programs that govern the operation of a computer system and make the hardware run. **There are two types of software**

- **System Software:** The system software is collection of programs designed to operate, control, and extend the processing capabilities of the computer itself. System software are generally prepared by computer manufactures. System software serves as the interface between hardware and the end users. **Examples:** Operating System, Compilers, Interpreter, Assembler etc.
- **Application Software:** It is the set of programs necessary to carry out operations for a specified application.

Application software can subdivide into three categories:

(A) Packages:-

Packages	
Word Processing	A package that process textual matter and creates organized and flawless documents.
Spreadsheets	An electronic spreadsheet is a program that accepts data in a tabular form and allow users to manipulate , calculate, analyze data in the desired manner.
Database Management Systems	DBMS is a package that can handle and manage bulk of stored data.
Desktop Publishing Software	Handles page layout by combining the functions of a traditional typesetter and a layout artist.
Graphics, Multimedia and Presentation applications	Application software that manipulates images is known as Graphics software.

(B) Utilities: Utilities are those application programs that assists the computer by performing housekeeping functions like backing up disk or scanning viruses etc.

Utilities	
Text Editor	Program is used for creating, editing text files.
Backup Utility	Program facilities the backing-up of disk.
Compression Utility	Large files can be compressed so that it takes less storage area.
Disk Defragmentor	It speeds up disk access by rearranging the files and free space on your computer.
Antivirus Software	It scans yours disk for viruses and removes them if any virus is found.

(C) Customized Software: This type of software is tailor-made software according to a user's requirements.

Following are the main five generations of computers:

S. No.	Generation & Description
1	First Generation (1946-1959) Vacuum tube based
2	Second Generation (1959-1965) Transistor based
3	Third Generation (1965-1971) Integrated Circuit based
4	Fourth Generation (1971-1980) VLSI microprocessor based
5	Fifth Generation (1980-onwards) ULSI microprocessor based

Boot: When computer starts, the operating system is first loaded (as it is essential for running all other programs), this process is known as booting.

Cold Boot: -When you turn the computer ON from an OFF position.

Warm Boot: - When you reset the computer that is already ON.

Motherboard: The motherboard serves as a single platform to connect all of the parts of a computer together. A motherboard connects CPU, memory, hard drives, optical drives, video card, sound card, and other ports and expansion cards directly or via cables. It can be considered as the backbone of a computer.

Number System

When we type some letters or words, the computer translates them in numbers as computers can understand only numbers. A computer can understand positional number system where there are only a few symbols called digits and these symbols represent different values depending on the position they occupy in the number.

A value of each digit in a number can be determined using

- ✓ The digit
 - ✓ The position of the digit in the number
 - ✓ The base of the number system (where base is defined as the total number of digits available in the number system).
1. **Decimal Number System:** The number system that we use in our day-to-day life is the decimal number system. Decimal number system has base 10 as it uses 10 digits from 0 to 9. In decimal number system, the successive positions to the left of the decimal point represent units, tens, hundreds, thousands and so on.
 2. **Binary Number System:** Uses two digits, 0 and 1, also called base 2 number system. Each position in a binary number represents a 0 power of the base (2). Last position in a binary number represents a x power of the base (2).
 3. **Octal Number System:** Uses eight digits, 0,1,2,3,4,5,6,7, also called base 8 number system, Each position in an octal number represents a 0 power of the base (8).
 4. **Hexadecimal Number System:** Uses 10 digits and 6 letters, 0,1,2,3,4,5,6,7,8,9,A,B,C,D,E,F. Letters represents numbers starting from 10. A = 10, B = 11, C = 12, D = 13, E = 14, F = 15. Also called base 16 number system. Each position in a hexadecimal number represents a 0 power of the base (16).

DBMS – Data Base Management System

DBMS: DBMS is the acronym of Data Base Management System. DBMS is a collection of interrelated data and a set of programs to access this data in a convenient and efficient way. It controls the organization, storage, retrieval, security and integrity of data in a database.

Architecture of DBMS divided into three levels:

1. **External view or User view/View Level:** It is the highest level of data abstraction. This includes only those portions of database of concern to a user or Application program. Each user has a different external view and it is described by means of a scheme called external schema.
2. **Conceptual view/Logical Level:** All the database entities and the relationship among them are included. One conceptual view represents the entire database called conceptual schema.
3. **Internal view/Physical Level:** It is the lowest level of abstraction, closest to the physical storage method. It describes how the data is stored, what is the structure of data storage and the method of accessing these data. It is represented by internal schema.

Networking

s means interconnected set of autonomous system that permit distributed processing to

Five components:

- ✓ Sender Computer
- ✓ Sender equipment (Modem)
- ✓ Communication Channel (Telephone Cables)
- ✓ Receiver Equipment (Modem)
- ✓ Receiver Computer

Classified on the basis of Geographical Coverage:

- **Local Area Network (LAN):** A local area network is relatively smaller and privately owned network with the maximum span of **10 km**.
- **Metropolitan Area Network (MAN) :** MAN is defined for less than **50 Km** and provides regional connectivity within a campus or small geographical area.
- **Wide Area Network (WAN):** A wide Area Network (WAN) is a group Communication Technology ,provides **no limit** of distance.

Types of Network

1. **Point to Point Network:** When a packet is sent from one router to another intermediate routers, the entire packet is stored at each intermediate router, stored there till the output line is free and then forwarded. A subnet using this principle is called **point to point** or **packet switched network**.

Topologies for a point to point Subnet

- **Star:** Each device has a dedicated point to point link only to a central controller, usually called a hub.
 - **Tree:** A tree topology is a variation of a star.
 - **Ring:** Each device has a dedicated point to point line configuration only with the two devices on either side of it.
 - **Bus:** One long cable acts as a backbone to link all the devices in the network.
2. **Broadcast Networks:** Broadcast networks have a single communication channel that is shared by all the machines on the network.

Transmission Media

- **Network Cables:** Network cables are used to connect computers. The most commonly used cable is Category 5 cable RJ-45.
- **Distributors:** A computer can be connected to another one via a serial port but if we need to connect many computers to produce a network, this serial connection will not work. The solution is to use a central body to which other computers, printers, scanners etc. can be connected and then this body will manage or distribute network traffic
- **Repeaters:** A repeater is an electronic device that receives a signal and retransmits it at a higher level or higher power, or onto the other side of an obstruction, so that the signal can cover longer distances.
- **Bridge:** A bridge is a product that connects a local area network (LAN) to another local area network that uses the same protocol (for example, Ethernet or token ring).
- **Routers:** A router is a device that forwards data packets along networks. A router is connected to at least two networks, commonly two LANs or WANs or a LAN and its ISP's network. Router sare located at gateways, the places where two or more networks connect.
- **Internal Network Cards:** Network card is a necessary component of a computer without which a computer cannot be connected over a network. It is also known as network adapter or Network Interface Card (NIC). Most branded computers have network card pre-installed. Network cards are of two types: Internal and External Network Cards.
- **External Network Cards:** External network cards come in two flavours like Wireless and USB based. Wireless network card need to be inserted into the motherboard but no network cable is required to connect to network.
- **Universal Serial Bus (USB):** USB card are easy to use and connect via USB port. Computers automatically detect USB card and can install the drivers required to support the USB network card automatically.
- **Modem (Modulator -DE Modulator):** Modem is a device attached to computers that can convert digital signals to analog signals to analog signals and vice versa.

Operating System:-

An Operating system is a program, which acts as an interface between a user and the hardware.

Characteristics of Operating System:

- ✓ **Memory Management** -- keeps tracks of primary memory of it is in use by whom, what part is not in use etc. and allocates the memory when a process or program requests it.
- ✓ **Processor Management** -- allocates the processor(CPU) to a process and de-allocates processor when it is no longer required.
- ✓ **Device Management** -- keeps track of all devices. This is also called I/O controller that decides which process gets the device, when, and for how much time.
- ✓ **File Management** -- allocates and de-allocates the resources and decides who gets the resources.
- ✓ **Security** -- prevents unauthorized access to programs and data by means of passwords and similar other techniques.
- ✓ **Job accounting** -- keeps track of time and resources used by various jobs and/or users.
- ✓ **Control over system performance** -- records delays between request for a service and from the system.
- ✓ **Interaction with the operators** -- The interaction may take place via the console of the computer in the form of instructions. Operating System acknowledges the same, does the corresponding action and informs the operation by a display screen.
- ✓ **Error-detecting aids** -- Production of dumps, traces, error messages and other debugging and error-detecting methods.
- ✓ **Coordination between other software and users** - Coordination and assignment of compilers, interpreters, assemblers and other software to the various users of the computer systems.

MS - Window

MS-Windows is a GUI based operating system. In Windows Operating system multiple applications can be simultaneously run in different windows.

- In **MS-Windows**, the screen upon which icons, windows, too are displayed is known as **desktop**.
- An **icon** is a graphic symbol that represents a window element like, file, folder, or **shortcut**.
- Loading up of operating system files into the computer's memory is called **booting up**.
- The **taskbar** is a bar, which is usually located at the bottom of the screen.
- **My computer** is helpful for viewing the contents of a single folder or drive.
- **Windows Explorer** is another way of seeing what is on your computer. Windows Explorer shows the computer's contents as a hierarchy.
- **File**: A program or document stored on a disk.
- **Toolbar**: A set of button you click to perform common tasks.
- A **folder** is a location in which you can store files and other folders.
- To create a new folder, **File—New—Folder** commands are clicked in My Computer windows.
- To find files or folders, **Start---Find---Files** or **Folder** commands are clicked.
- To create a **shortcut** to a file, firstly select the file or folder, whose shortcut is to be created. Then drag the file icon through right mouse button to desired location where shortcut to be placed, and then select create shortcut(s).
- **To shut down** the computer, **Start—Shut Down** commands are clicked.

MS-Word

- ✓ A **word processor** is a package that processes textual matter and creates organized and flawless documents.
- ✓ The word processor offers very useful features like speed, powerful editing and formatting features, permanent storage, Graphics, object linking and embedding, spell check and mail merge etc.
- ✓ The word processor automatically fits the typed text within the specified left and right margins. This feature is called word wrapping.
- ✓ Margins can be four type viz. left, right, top and bottom.
- ✓ The distance between text boundaries and page margins is called indent. The indent can be positive, negative or hanging indent.
- ✓ The text layout
- ✓ In Word, paragraphs can be formatted through Paragraph option of Format menu and the borders can be applied through Borders and shading option of Format menu.
- ✓ The page formatting in Word can be controlled through Page Setup ... option of **File** menu. The

- header and footer can be created and formatted using Header and Footer option of the view menu.
- ✓ In word, the document can either be printed through print button of standard toolbar or through the Print.. option of **File** menu. The help is available in Word through the Help menu.
- ✓ In word, spelling and grammar can be checked either through the **spelling and Grammar** option of Tools menu.
- ✓ The Autocorrect feature of Word converts shorthand into longer strings. You can create your

own Autocorrect entries by clicking to **Autocorrect** command to **Tools** menu.

- ✓ Tables can be inserted in a Word document through Table button of Standard toolbar and can be manipulated through the table drop menu.
- ✓ In MS-Word, **the mail merge** involves two files – Main document and data source file to produce the merged document. The main document and data source can handled through Mail Merge option of Tools menu.

Shortcuts

Shortcut	Description
Ctrl+W	Close the active window / document
Ctrl+Z	Undo an action
Ctrl+Y	Redo the last action or repeat an action
Ctrl+S	Save a document
Ctrl+P	Print a document
Ctrl+K	Insert a hyperlink.
Alt+Right.	Arrow Go forward one page.
Ctrl+C	Copy selected text or graphics to the Office Clipboard.
Ctrl+V	Paste the most recent addition to the Office Clipboard.
Ctrl+Shift+A	Format all letters as capitals.
Ctrl+B	Applies or removes bold formatting.
Ctrl+I	Applies or removes italic formatting.
Ctrl+=	Apply subscript formatting (automatic spacing).
F1	Open Help
F4	Repeat the last action performed(Word 2000+)
F5	Open the Find, Replace, and Go To window in Microsoft Word
F7	Spellcheck and grammar check selected text or document
F12	Save As

Some of the valid file names are as follows:

Type of File	File name and Extension
Notepad File	Type.txt
Paintbrush File	Painting.bmp
Word	Document.doc
Excel	Book.xls
PowerPoint	Presentation.ppt
Database	Db1.mdb
Executable	Game.exe

MS-EXCEL

- ✓ A **spreadsheet** is a software tool that lets one enter, calculate, manipulate and analyze set of numbers.
- ✓ A **Worksheet** is a grid of cells made up of horizontal rows and vertical columns.
- ✓ A workbook is a group of worksheets.
- ✓ Three types of data can be entered in a worksheet (i) **number** (ii) **Text** (iii) **Formulas**.
- ✓ Cell can be referenced in three ways (i) **relative** (ii) **absolute** (iii) **mixed**
- ✓ A **cell can be edited either by overwriting or by partially modifying the cell contents**.
- ✓ A **range** can selected using mouse or keyboard.
- ✓ A range can be either through **copy** and **paste** operations or by dragging the fill handle.
- ✓ A range can be moved either through cut and paste operations or by dragging the range border.

- ✓ A range can be cleared through **Edit--Clear** command.
- ✓ To erase everything from a worksheet ,select all the cells in the worksheet and then use **Edit—Clear—All**.
- ✓ To save a workbook use **File- Save** command.
- ✓ To open a workbook use **File—Open** command.
- ✓ To insert cells, rows or columns in worksheet, use **Insert---Cells----**, **Insert-----Rows** or **Insert-----Column** command respectively.
- ✓ General arrangement of data is known as formatting.
- ✓ Formatting does not affect the actual cell value only the appearance change.

- ✓ Formatting is performed in MS-Excel through options available in Format menu.
- ✓ Charts are the pictorial re worksheet data.
- ✓ Various chart types in MS column chart, bar chart, line chart, pie chart, XY(Scatter) chart.
- ✓ Chart in MS-Excel saved in two ways : (i) embedded chart (ii) chart sheet
- ✓ Embedded chart is a chart object that is placed on a worksheet and saved with that work sheet.
- ✓ Chart sheet is a sheet in workbook that contains only a chart.
- ✓ Charts are created using chart wizard.

Powerpoint

- ✓ The application software that can create professional looking visual aids is called Presentation Graphics Software.
- ✓ **MS-PowerPoint** can be started by clicking at Start—Program---Microsoft PowerPoint.
- ✓ A slide can contain one or more of these components: **Titles, Graphs, Drawing objects, ClipArt** and **Pictures**.
- ✓ The slide components that are used for reference are: **Handouts, Notes ,Outlines**.
- ✓ A new presentation can be created through one of these methods:(i) **Auto content Wizard** (ii) **Design Templates** (iii) **Sample Presentation** and (iv) **Blank Presentation**
- ✓ A new side can be added by either clicking at **Common Tasks** options of **Formatting** toolbar and then selecting New Slide option, by clicking at Insert menu's **New Slide** option.
- ✓ A presentation in PowerPoint can viewed in any of these views: **Normal, Outline, Slide, Slide Sorter, Slide Show** and **Notes Page View**.
- ✓ To apply new design to slides, click either at Apply Design Template option of **Common Tasks** options of Formatting toolbar, or at Format

- menu's Apply Design Template option or ever from the shortcut menu.
- ✓ A color scheme is a combination of various colors used for text and other presentation elements.
- ✓ A color scheme can be changed by clicking at **Slide Color Scheme** option of Format menu.
- ✓ Background color can be changed by clicking at **Format----Background** command or even through slide's shortcut menu.
- ✓ You can change text font and style by using **Format---Font** command.
- ✓ Header and Footer information can be viewed and changed by clicking at **View---Header** and Footer option.
- ✓ The slide ---shorter view in useful for viewing the slides in miniature forms and for rearranging them.
- ✓ Movies (Vedio) & Sound can be inserted by using Insert—**Movies & Sounds** command.
- ✓ While creating slide shows you can add transitions to slides by using Slide Show --- Slide Transition command.
- ✓ To add animation, you can use Slide **Show-----Custom** Animation commands.

Internet

- The **Internet** is a global system of interconnected computer networks that use the standard Internet protocol suite (TCP/IP) to link several billion devices worldwide. It also known as "**network of networks**" that consists of millions of private, public, academic, business, and government networks.

Various Applications of Internet are:

- ✓ Exchange messages using e-mail (Electronic mail).
- ✓ Transfer files as well as software.
- ✓ Browse through information on any topic on web.
- ✓ Communicate in real time (chat) with others connected to the Internet.
- ✓ Search databases of government, individuals and organizations.
- ✓ Read news available from leading news groups.
- ✓ Send or receive animation and picture files from distant places.
- ✓ Set up a site with information about your company's products and services.

- The **World Wide Web** commonly known as the Web or www developed founded by **Tim Berners - Lee** in 1989, is a system of interlinked hypertext documents that are accessed via the Internet. These multimedia pages are ever-changing.
- A **web browser** (commonly referred to as a browser) is a software application for retrieving, presenting information resources on the World Wide Web.

Various features of a Web Browser are:

- ✓ **Menu bar:** The menu bar, located at the very top of the screen, can be accessed using the mouse. Actions that are in black can be performed, while actions that cannot be performed will be in gray or lightened.
- ✓ **Tool bar:** The tool bar is located at the top of the browser; it contains navigational buttons for the Web. Basic functions of these buttons include:

<u>Command</u>	<u>Function</u>
Home	Opens or returns to starting page
Back	Takes you to the previous page
Forward	Takes you to the next page
Print	Prints current page
Stop	Stops loading a page
Reload	Refresh/redisplays current page
Search	Accesses search engine

- ✓ **Location bar:** The location bar, below the tool bar, is a box labelled "Location," "GoTo," or "Address." You can type in a site's address, and press the Return or Enter key to open the site.
- ✓ **Status bar:** The status bar is located at the very bottom of the browser window. You can watch the progress of a web page download to determine if the host computer has been contacted and text and images are being downloaded.
- ✓ **Scroll bar:** The scroll bar is the vertical bar located on the right of the browser window. You can scroll up and down a web page by placing the cursor on the slider control and holding down the mouse button.
- ✓ A **website** is a set of related web pages served from a single web domain.
- ✓ The **Uniform Resource Locator**, abbreviated as URL is the Address for web sites. Most of them begin with http (HyperText Transfer Protocol), followed by a colon and two slashes.. In most web browsers, the URL of a web page is displayed on top inside an address bar. An example of a typical URL would be "**http://www.gradestack.com**".
- ✓ A **Home page, index page, or main page** is a page on a website. A home page usually refers to:
- ✓ A **Hyperlink** is a reference to data that the reader can directly follow either by clicking or by hovering or that is followed automatically.
- ✓ **Downloading** means to receive data to a local system from a remote system, or to initiate such a data transfer.
- ✓ **Uploading** refers to the sending of data from a local system to a remote system such as a server or another client with the intent that the remote system should store a copy of the data being transferred.
- ✓ An **email attachment** is a computer file sent along with an email message. One or more files can be attached to any email message, and be sent along with it to the recipient. The first email was sent by **Ray Tomlinson** to himself in 1971.
- ✓ **CC (Carbon Copy)** in e - mail indicates those who are to receive a copy of a message addressed primarily to another. The list of CCed recipients is visible to all other recipients of the message.
- ✓ An additional **BCC (blind carbon copy)** field is available for hidden notification; recipients listed in the BCC field receive a copy of the message, but are not shown on any other recipient's copy (including other BCC recipients).
- ✓ The **Drafts folder** retains copies of messages that you have started but are not yet ready to send.
- ✓ **Hotmail**, a free e-mail service provided by Microsoft which was established in 1995 was co - founded by an Indian American entrepreneur Sabeer Bhatia along with Jack Smith in July of 1996.
- ✓ An **Internet Protocol address** (also known as an **IP address**) is a numerical label assigned to each device (e.g., computer, printer) participating in a computer network. It acts as an identifier for a computer. It is a unique address for every computer.
- ✓ **Top-level domain:** Each part of a domain name contains certain information. The first field is the host name, identifying a single computer or organization. The last field is the top-level domain, describing the type of organization and occasionally country of origin associated with the address. For e.g. - .com - **Commercial**, .edu - **Educational**.

Important Key in a Keyboard

Toggle keys- toggle the input from a group of keys on a keyboard between two different input modes.

- ✓ Caps Lock
- ✓ Num Lock
- ✓ Scroll Lock
- ✓ Insert

Modifier Keys - In computing, a modifier key is a special key (or combination) on a computer keyboard that temporarily modifies the normal action of another key when pressed together. For e.g.-

- ✓ Shift
- ✓ Alt
- ✓ Ctrl
- ✓ Fn

Function keys - A function key is a key on a computer or terminal keyboard which can be programmed so as to cause an operating system command interpreter or application program to perform certain actions, a form of soft key. For e.g. - **F1 through F12** keys are known as function keys. Each keys perform different functions.

Commonly Used Computer Terms

- ✓ **Abort:** To stop a program or function before it has finished.
- ✓ **Algorithm:** A set of instructions that provides a solution to a given problem.
- ✓ **Animation:** A simulation of movement created by displaying a series of pictures, or frames. For example, cartoons on television.
- ✓ **ANSI:** American National Standards Institute, a powerful industry association of USA, promoting Programming language standards.
- ✓ **Antivirus:** Program A utility that searches a hard disk for viruses and removes any, that is found.
- ✓ **Architecture:** A design. It can refer to either hardware or software or to a combination of hardware and software. The architecture of a system defines its broad outlines.
- ✓ **ASCII:** American Standard Code for Information Inter change. This is a seven/eight bit code widely used in computers for the transfer of data.
- ✓ **Bandwidth:** The amount of data that can be transmitted in a fixed amount of time. It is usually expressed in bits per second (bps) or bytes per second.
- ✓ **Bit:** The smallest unit of information in computer system. Bit is short for binary digit; either a "1" or a "0".
- ✓ **Boot:** The process of getting the computer started.
- ✓ **Byte:** A byte is made up of 8 bits. The amount of memory it takes to store a single character.
- ✓ **Cache:** A separate area of Primary Memory (RAM) where the computer stores a copy of frequently used information for quick access. This is meant to speed up the operation of the hard disk.
- ✓ **CD-ROM:** Compact Disk-Read Only Memory. This is a permanent storage device used to store large quantities of information that need not be changed.
- ✓ **CGA:** Color Graphics Adapter. Low-resolution screen (640x200 pixels) with color capability.
- ✓ **Character:** A number, letter, symbol, or punctuation mark.
- ✓ **Chip:** A small piece of silicon containing thousands or millions of electrical elements. Also called an Integrated Circuit (IC).
- ✓ **Compatible:** The ability of one device or program to work with another device or program. For example, a printer and a computer are said to be compatible if they can be connected to each other.
- ✓ **Conventional Memory:** The first 640K of electronic Memory (RAM) in a computer used to run OS and applications.
- ✓ **Debug:** In computer related systems, fixing software related problem is known as debugging.
- ✓ **Digitize** To scan a piece of artwork in very fine detail and store it in a form that computer understands.
- ✓ **DOS:** It stands for Disk Operating System. It is a single user operating system.
- ✓ **DVD:** Digital Versatile Disc or Digital Video Disc
- ✓ **Dynamic:** Refers to actions that take place at the moment they are needed rather than in advance.
- ✓ **EDP:** Electronic Data Processing.
- ✓ **E-Mail:** Electronic Mail. A facility to send electronic messages to another person on a computer network.
- ✓ **End-User:** The end user is the individual who uses the product after it has been fully developed and marketed.
- ✓ **EPROM:** Erasable Programmable Read Only Memory. A type of ROM that can be programmed or reprogrammed usually by exposing a normally covered sector to UV-Light.
- ✓ **Extended Memory:** Memory in addition to conventional memory used to run and manage applications; together with expanded memory, it helps PCs to address increased amounts of data in memory.

- ✓ **Fax/Facsimile:** A way of transmitting copies or documents over telephone lines. Fax is short for Facsimile.
- ✓ **Gigabyte:** Abbreviated as GB, is equal to 1024 MB.
- ✓ **GUI Graphical User Interface.** A user interface that works visually and is based on the selection of actions using a mouse or a similar pointing device to click on icons or to pick options from menus; see also icon.
- ✓ **Hertz:** A unit of frequency that means Cycles per Second.
- ✓ **High Density:** The amount of information a disk can hold. High Density disks hold more information than Double Density disks.
- ✓ **Hypertext:** A method of presenting information so the user can view it in a non-sequential way, regardless of how the topics were originally arranged. It has now evolved as a flexible software technology to create electronic books provides fast and flexible access to search criteria and provides quick access to information in large documents.
- ✓ **HTML:** Hyper Text Markup Language. A markup or structuring language used to describe Web and Intranet documents. It is used to define structure, appearance and placement of HTML elements including, fonts, graphics, text, hypertext links to other sites and many more details.
- ✓ **IBM:** International Business Machines, a USA based multinational Company.
- ✓ **Icon:** A graphical screen element that executes one or more commands when selected with a mouse or other pointing device
- ✓ **IDE:** Integrated Device Electronics, a standard used for connecting hard drive to a computer. IDE hard drives are very common and relatively inexpensive.
- ✓ **Intel:** The manufacturer of the most popular microprocessors or CPUs.
- ✓ **Intelligent:** Printer Printer combining laser, computer and photocopying technology.
- ✓ **Internet:** The world's largest computer network that links many of the scientific, research and educational computers as well as commercial networks. The internet uses TCP/IP protocols, and computers on Internet can run on any operating system, like, several variations of UNIX, Windows NT, and VMS etc.
- ✓ **Intranet:** In the most general sense, a private corporate network that uses Internet technology based software and TCP/IP protocol standards. Many companies use intranets for tasks as simple as distributing a company letter and for tasks as complex as posting and updating technical support bulletins to service personnel worldwide. An intranet does not always include permanent connection to Internet.
- ✓ **Kilobyte (K, KB)** Approximately one thousand characters; actually 1024bytes.
- ✓ **LAN** An acronym for local area network. A system of PCs that are located relatively near to each other and connected by wire so that individual users can cooperatively process information and share resources; see also WAN.
- ✓ **Laptop Computer:** A portable computer, small enough to be held on a lap, but slightly larger than a notebook computer.
- ✓ **LED:** Light Emitting Diode. An electronic device that lights up when electricity is passed through it.
- ✓ **Light Pen:** An input device that allows a user to write on or point to a special pad or the screen of a pen-based computer, such as a PDA.
- ✓ **Macintosh:** A PC based on a Motorola microprocessor employing GUI. Apple Macintosh has been in use since late eighties.
- ✓ **Macro:** A symbol, name, or key that represents a list of commands, actions or keystrokes.
- ✓ **Math co-processor:** Part of the microprocessor; a companion chip designed to perform complex calculations.
- ✓ **Megabyte (M, MB):** Approximately one million characters; actually 1,048,576 bytes. A measure of memory or storage.
- ✓ **Megahertz (MHz):** A measure of processing speed. The higher the value, the faster a computer can work.
- ✓ **Microprocessor:** A single chip containing all the elements of a computer's CPU.
- ✓ **MIPS:** Million Instructions Per Seconds, a unit for measuring the speed of a computer.
- ✓ **Mother Board:** The main circuit board of a computer, which carries electrical signals to and from various parts of the computer.
- ✓ **Multimedia:** A computer system that combines text, graphics, animation, music, voice and video media; may include stereo speakers as an output device.
- ✓ **Multiprocessing:** It refers to a computer system's ability to support more than one process at the same time. It is also called multitasking.
- ✓ **Nibble:** Half a byte i.e. 4bits.
- ✓ **Non-Volatile Memory:** This is data storage that does not lose its contents on power off; for example, ROM.
- ✓ **Notebook Computer:** A portable computer, approximately 8½ by 11 inches, that fits inside a briefcase.
- ✓ **Numeric keypad:** The part of a keyboard that looks like an adding machine, with 10 digits and mathematical operators; usually located on the right side of the keyboard.
- ✓ **Office-Automation:** The use of computer systems to execute a variety of office operations, such as word processing, accounting and Email.
- ✓ **Parallel Port:** An outlet on a computer used to attach a device, such as a printer. A parallel port sends data (bits) down the wire side by side (parallel to each other).
- ✓ **Pentium:** The fifth generation of microprocessors. The Pentium is 2 to 3 times faster than the 80486, the fourth generation of microprocessors.

- ✓ **Peripheral:** Any piece of hardware attached to the outside of a computer. Examples are printers and modems.
- ✓ **Pixel:** Short for "Picture Element". A Pixel is the smallest dot the computer can control on the screen.
- ✓ **Portable computer:** A small computer that usually runs on batteries. In the categories of portable computers are laptop, notebook, sub-notebook and palmtop.
- ✓ **Protocol:** In networking and communications, the formal specification that defines the procedures to follow when transmitting and receiving data. Protocol defines the format, timing, sequence and error checking used on the network.
- ✓ **Resolution:** The size and quantity of dots that make up a printed page, screen or scanned image.
- ✓ **Runtime:** Error An error that occurs during the execution of a program.
- ✓ **Scanner:** An input device used to copy a printed document into a computer's memory in digital form, without requiring manual keying.
- ✓ **SCSI:** Small Computer System Interface. A standard for connecting a hard drive to a computer.
- ✓ **Serial Port:** An outlet on a computer used to attach a device, such as a modem. A serial port sends data (bits) down the wire one at a time (in a series).
- ✓ **Service Pack:** It is an update to a software version that fixes an existing problem, such as a bug or provides enhancements to the product that will appear in the next version of the product.
- ✓ **TCP/IP:** Transmission Control Protocol / Internet Protocol is a set of communication protocols that encompass media access, packet transport, session communications, file transfer, e-mail, and terminal emulation. TCP/IP is supported by a large number of H/W and S/W vendors and is available on many computer systems, from PCs to mainframes.
- ✓ **Troubleshoot:** To isolate the source of a problem and fix it. In case of computer systems, troubleshoot is usually used when the problem is hardware related.
- ✓ **UNIX:** A multi user operating system.
- ✓ **Upgrade:** A new version of a software or hardware product designed to replace an older version of the same product.
- ✓ **UPS:** Uninterruptible Power Supply. It is a power supply that includes a battery to maintain power in the event of a power cut for several minutes to some hours.
- ✓ **Utility:** A program that performs a very specific task, usually related to managing system resources.

Some expected and important questions of Computer Awareness for upcoming examinations

Computer Questions

1. The Central Processing Unit (CPU) consists of ___.
 (1) Registers and Arithmetic Logic Unit
 (2) Instruction Decoding Circuit
 (3) a control and timing section
 (4) All of the above
 (5) None of these **Ans (4)**
2. What are the two essential parts of the computer?
 (1) Keyboard & Mouse (2) Hardware & Software
 (3) Printer & Screen (4) Monitor & Keyboard
 (5) None of these **Ans (2)**
3. The computer size was very large in ___.
 (1) First Generation (2) Second Generation
 (3) Third Generation (4) Fourth Generation
 (5) None of these **Ans (1)**
4. The earliest calculating device is:
 (1) Abacus (2) Clock
 (3) Difference Engine (4) Calculator
 (5) None of these **Ans (1)**
5. The man who built the first Mechanical Calculator was:
 (1) Joseph Marie Jacquard (2) John Mauchly
 (3) Blaise Pascal (4) Harward Ailken
 (5) None of these **Ans (3)**
6. Punch cards were first introduced by ___.
 (1) James Pascal (2) Harward Ailken
 (3) Herman Hollerith (4) Marie Jacquard
 (5) None of these **Ans (3)**
7. Integrated circuit contained:
 (1) vacuum tube (2) transistor
 (3) condenser (4) resistance
 (5) None of these **Ans (2)**
8. VLSI (Very Large Scale Integration) Integration Circuit Technology was used in which generation?
 (1) first generation (2) second generation
 (3) third generation (4) fourth generation
 (5) None of these **Ans (4)**

9. IC chips were used in ____.
- (1) first generation (2) second generation
(3) third generation (4) fourth generation
(5) None of these **Ans (3)**
10. Artificial Intelligence is associated with which generation?
- (1) First Generation (2) Second Generation
(3) Third Generation (4) Fourth Generation
(5) Fifth Generation **Ans (5)**
11. Each digit in Binary Coded Decimal (BCD) is known as:
- (1) Bit (2) Byte
(3) Nibble (4) Bite
(5) None of these **Ans (3)**
12. What is a term used for a half byte?
- (1) bit (2) nibble
(3) bug (4) word
(5) None of these **Ans (2)**
13. The oldest form of computer language is called
- (1) Machine Language (2) BASIC
(3) FORTRAN (4) COBOL
(5) PASCAL **Ans (1)**
14. PARAM and ANURAG is super computer developed in:
- (1) China (2) USA
(3) India (4) England
(5) Japan **Ans (3)**
15. Which device is used as the standard pointing device in a Graphical User Environment?
- (1) Keyboard (2) Mouse
(3) Joystick (4) Track Ball
(5) None of these **Ans (2)**
16. Which printer is very commonly used for desktop publishing?
- (1) Laser Printer (2) Inkjet Printer
(3) Daisywheel Printer (4) Dot matrix printer
(5) None of these **Ans (1)**
17. Which of the following is the term related with scanners?
- (1) Laser (2) TWAIN
(3) Cartridge (4) Toner
(5) None of these **Ans (2)**
18. Which is considered a direct entry input device?
- (1) Optical scanner (2) Mouse and digitizer
(3) Light pen (4) All of the above
(5) None of these **Ans (4)**
19. Time during which a job is processed by the computer is:
- (1) Delay times (2) Execution time
(3) Real time (4) Down time
(5) None of these **Ans (2)**
20. Which of the following memories has the shortest access time?
- (1) Cache memory (2) Magnetic bubble memory
(3) Magnetic core memory (4) RAM
(5) None of these **Ans (1)**
21. Cursor is a ____.
- (1) Pixel (2) Thin blinking line
(3) Pointing device (4) Track Ball
(5) None of these **Ans (3)**
22. Which of the following is not an output device?
- (1) Scanner (2) Printer
(3) Flat Screen (4) Mouse
(5) None of these **Ans (1)**
23. The touch pad is a ____ device.
- (1) Dynamic Pointing (2) Stationary Pointing
(3) Temporary Pointing (4) Sensitive Pointing
(5) None of these **Ans (2)**
24. The OMR used in the competitive examination stands for:
- (1) Optical Magnetic Reader
(2) Optical Mark Reader
(3) Optical Memory Reader
(4) Optical Monitor Reader
(5) None of these **Ans (2)**
25. Memory unit is one part of:
- (1) Input Device (2) Control Unit
(3) Output Device (4) Central Processing Unit
(5) None of these **Ans (4)**
26. Which of the following device can store large amount of data?
- (1) Floppy Disk (2) Hard Disk
(3) CDROM (4) Zip Disk
(5) None of these **Ans (2)**
27. Memory is made up of:
- (1) Set of wires (2) Set of circuits
(3) Large number of cells (4) All of the above
(5) None of these **Ans (3)**
28. EPROM can be used for:
- (1) Erasing the contents of ROM
(2) Reconstructing the contents of ROM
(3) Erasing and reconstructing the contents of ROM

47. Software, such as Explorer and Firefox, are referred to as ____.
- (1) Systems software (2) Utility software
(3) Browsers (4) Internet tools
(5) None of these **Ans (3)**
48. What type of telecommunications hardware allows you to access the web?
- (1) Browser (2) Modem
(3) FTP protocol (4) IRC
(5) All of above **Ans (2)**
49. _____ is data that has been organized or presented in a meaningful fashion.
- (1) A process (2) Software
(3) Storage (4) Information
(5) None of these **Ans (4)**
50. The name for the way that computers manipulate data into information is called:
- (1) programming. (2) processing
(3) storing (4) organizing
(5) None of these **Ans (2)**
51. A ____ is approximately a million bytes.
- (1) gigabyte (2) kilobyte
(3) megabyte (4) terabyte
(5) None of these **Ans (3)**
52. The binary language consists of ____ digit(s).
- (1) 8 (2) 2
(3) 1,000 (4) 1
(5) None of these **Ans (2)**
53. A string of eight 0s and 1s is called a:
- (1) megabyte (2) byte
(3) kilobyte (4) gigabyte
(5) None of these **Ans (2)**
54. What menu is selected to print?
- (1) File (2) Tools
(3) Special (4) Edit
(5) None of these **Ans (1)**
55. A ____ contains buttons and menus that provide quick access to commonly used commands.
- (1) menu bar (2) tool bar
(3) window (4) find
(5) None of these **Ans (2)**
56. Which of the following terms is just the collection of networks that can be joined together?
- (1) virtual private network (2) LAN
(3) Intranet (4) Extranet
(5) Internet **Ans (5)**
57. The standard protocol of the Internet is ____.
- (1) T
(3) F
(5) None of these **Ans (1)**
58. Servers are computer that provide resources to the other computers connected to a ____.
- (1) Network (2) Mainframe
(3) Super Computer (4) Client
(5) None of these **Ans (1)**
59. A repair for known software bug, usually available to no charge on the internet, is called a (n) ____.
- (1) version (2) patch
(3) tutorial (4) FAQ
(5) None of these **Ans (2)**
60. To access, a mainframe or super computer, users often use a ____.
- (1) Terminal (2) Node
(3) Desktop (4) Handheld
(5) None of these **Ans (1)**
61. Which type of memory gets lost when your switch off?
- (1) ROM (2) RAM
(3) Cache (4) Dynamic
(5) Static **Ans (2)**
62. Which type of network would use phone lines?
- (1) WAN (2) LAN
(3) WWAN (4) Wireless
(5) None of these **Ans (1)**
63. Which type of memory holds the program to start up the computer?
- (1) ROM (2) RAM
(3) Cache (4) Static
(5) None of these **Ans (1)**
64. The term used to describe the intangible instructions that tell the computer what to do is
- (1) hardware (2) software
(3) storage (4) input/output
(5) None of these **Ans (2)**
65. The disks stores information in
- (1) Tracks and Sectors (2) Blocks
(3) Rows and Columns (4) Tables
(5) None of these **Ans (1)**
66. To connect networks of similar protocols, _____ are used
- (1) Routers (2) Gateways
(3) Bridges (4) Dial-up routes
(5) None of these **Ans (3)**

67. Viruses, Trojan horses and Worms are _____
 (1) harmless applications resident on computer
 (2) able to harm computer system
 (3) unable to detect if present on computer
 (4) user-friendly applications
 (5) None of these **Ans (2)**
68. A set of instructions telling the computer what to do is called ____
 (1) mentor (2) program
 (3) compiler (4) instructor
 (5) None of these **Ans (2)**
69. Which of the following refers to the process of a computer receiving information from a server on the Internet?
 (1) Downloading (2) outputting
 (3) inputting (4) uploading
 (5) None of these **Ans (1)**
70. Which keys enable the input of numbers quickly?
 (1) ctrl, shift and alt (2) function keys
 (3) arrow keys (4) the numeric keypad
 (5) None of these **Ans (4)**
71. Which of the following is the advantage of using a spreadsheet?
 (1) Calculations can be done automatically.
 (2) Changing data automatically updates calculations.
 (3) More flexibility (4) All the above
 (5) None of these **Ans (4)**
72. Which of the following shortcut keys is used to check spelling?
 (1) F1 (2) F2 (3) F7
 (4) F9 (5) None of these **Ans (3)**
73. On an excel sheet the active cell is indicated by -----
 (1) dark wide border (2) a dotted border
 (3) a blinking border (4) All the above
 (5) None of these **Ans (1)**
74. To move to the previous worksheet, we press:
 (1) Alt + Pg Up (2) Ctrl + PgUP
 (3) Ctrl + PgDn (4) Shift + Tab
 (5) None of these **Ans (4)**
75. If you press, the cell accepts your typing as its contents.
 (1) Enter (2) Ctrl + Enter
 (3) Tab (4) Insert
 (5) None of these **Ans (1)**
76. Which of the following displays the buttons for changing text svtle. alignment and size?
 (2) Status bar
 (4) Formatting tool bar
 (5) None of these **Ans(4)**
77. All formulas in Excel start with _____.
 (1) 1 % (2) + (3) =
 (4) - (5) None of these **Ans (3)**
78. To add two cells (A1 and A2) together you use which of the following formula?
 (1) = A1 + A2 (2) = AdD (A1 + A2)
 (3) = together (A1: A2) (4) A1 plus A2
 (5) None of these **Ans (1)**
79. Find the correct set of three types of data found in a spreadsheet.
 (1) Data, words, numbers
 (2) Equations, data, numbers
 (3) Words, numbers, labels
 (4) Numbers, formulas, labels
 (5) None of these **Ans (4)**
80. Which key is used in combination with another key to perform a specific task?
 (1) function (2) arrow
 (3) space bar (4) control
 (5) None of these **Ans (4)**
81. What is an embedded system?
 (1) A program that comes wrapped in a box
 (2) A program that is permanently part of computer
 (3) A computer that is part of a larger computer
 (4) A computer and software system that controls a machine or appliance
 (5) None of these **Ans (4)**
82. Text in a column is generally aligned
 (1) justified (2) right
 (3) center (4) left
 (5) None of these **Ans (4)**
83. A directory within a directory is called
 (1) Mini Directory (2) Junior Directory
 (3) Part Directory (4) Sub Directory
 (5) None of these **Ans (4)**
84. Why should you delete unknown e-mail attachments?
 (1) You could go to jail
 (2) the person could track you down and hurt you
 (3) it is bad manners
 (4) it might contains a virus that could hurt your computer
 (5) None of these **Ans (4)**

85. The altering of data so that it is not usable unless the changes are undone is:
 (1) Biometrics (2) Compression
 (3) Encryption (4) Ergonomics
 (5) None of these **Ans (3)**
86. are used to identify a user who returns to a Website.
 (1) Cookies (2) Plug-in (3) Scripts
 (4) ASPs (5) None of these **Ans (1)**
87. Which term identifies a specific computer on the web and the main page of the entire site
 (1) URL (2) Web site address
 (3) Hyperlink (4) Domain name
 (5) None of these **Ans (1)**
88. The code that relational database management systems use to perform their database task is referred to as
 (1) QBE (2) SQL
 (3) OLAP (4) Sequel Server
 (5) None of these **Ans (2)**
89. The _____ contains data descriptions and defines the name, data type, and length of each field in the database.
 (1) data dictionary (2) data table
 (3) data record (4) data field
 (5) None of these **Ans (1)**
90. Personal logs or journal entries posted on the Web are known as:
 (1) listservs (2) Webcasts
 (3) blogs (4) subject directories
 (5) None of these **Ans (3)**
91. Arranging of data in a logical sequence is known as ...
 (1) Classifying (2) Searching
 (3) Sorting (4) Reproducing
 (5) None of these **Ans (3)**
92. One of the more recent e-mail scams, which lures internet users into revealing personal information is referred to as :
 (1) phishing (2) flaming
 (3) blogging (4) pop-ups
 (5) None of these **Ans (1)**
93. A process known as _____ is used by large retailers to study trends.
 (1) data mining (2) data selection
 (3) POS (4) data conversion
 (5) None of these **Ans (1)**
94. Nibble describes a bits combination of :
 (1) 5 bits (2) 6 bits
 (3) 7 bits (4) 4 bits
 (5) None of these **Ans (4)**
95. The OSI model is divided into _____ processes called layers.
 (1) five (2) six
 (3) seven (4) eight
 (5) None of these **Ans (3)**
96. When data changes in multiple lists and all lists are not updated, this causes:
 (1) data redundancy (2) information overload
 (3) duplicate data (4) data inconsistency
 (5) None of these **Ans (4)**
97. _____ are words that a programming language has set aside for its own use.
 (1) Control words (2) Reserved words
 (3) Control structures (4) Reserved keys
 (5) None of these **Ans (2)**
98. _____ describe what is a database field.
 (1) Structures (2) Field markers
 (3) Field definition (4) Field names
 (5) None of these **Ans (4)**
99. Which of the following places the common data elements in order from smallest to largest ?
 (1) Character, file, record, field, database
 (2) Character, record, field, file, database
 (3) Character, field, record, file, database
 (4) Bit, byte, character, record, field, file, database
 (5) None of the above **Ans (4)**
100. _____ terminals (formerly known as cash registers) are often connected to complex inventory and sales computer systems.
 (1) Data (2) Point-of-sale (POS)
 (3) Sales (4) Query
 (5) None of these **Ans (4)**
