

BC: REPLACING CHAFF FAN CORDS ON A 45W CHAFF FAN

SOME OLDER BC ROASTERS MADE AROUND 2015-2016 MAY HAVE USED A CHAFF FAN WITH A 3 PRONG AVIATION PLUG INSTEAD OF THE STANDARD 2 PRONG PLUG ON MOST MODELS FROM 2016 TO 2023.

THEREFORE IF REPLACING THE FAN WITH A NEWER MODEL YOU MAY NEED TO REMOVE THE CORD AND PLUG FROM OLDER FAN AND PUT ON NEWER FAN. THIS GUIDE SHOWS THE BEST WAY TO DO THIS.

1. USING A SCREWDRIVER REMOVE THE COVER OVER THE ELECTRIC BOX ON CHAFF FAN.

2. THERE YOU WILL FIND THE 2 POWER WIRES GOING INTO FAN ELECTRIC BOX. YOU CAN SNIP THESE OFF BELOW THE CONNECTORS ALLOWING ENOUGH SPARE WIRE TO CONNECT THE 2 POWER WIRES FROM YOUR 3 PRONG CORD TO THESE AND THEN THE 3RD WIRE SHOULD BE THE GROUND WIRE THAT CAN BE ATTACHED TO THE BASE OF FAN INSIDE ELECTRIC BOX USING A SCREW FROM THE OLD FAN TO ATTACH IT TO BASE OF FAN.
