Hohl's Friendly Service

JUNE

Newsletter 2019

Volume 5, Issue 6

41 Years Dedicated To Serving This Community!

This world is constantly changing, with most retailers trying to keep up with the trends, fads and limitless gimmicks. At Hohl's we stick to the tried and true basics. Quality Products, coupled with knowledgeable and friendly staff. We may not have all of the answers; however, we do have many resources and we are committed to exceptional service, which means that we will do our best to give you the correct answers and products. We often hear "Thank You for taking the time to help me!" This is our pleasure; and our goal is for our customers' to want to come back, because of the service they consistently receive, with economical prices and value. We even load with a smile.

LIFE CYCLE OF THE JAPANESE BEETLE

Grub to Japanese Beetle to Eggs to Grub

We Carry
Straw Erosion Mats
8 ft. x 112.5 ft.

STOP IN TO CHECK OUT OUR NEW BIRD FEEDER AND SEED CAKE COLLECTIONS

June is the last month to stop the grubs from turning into Japanese Beetles! Get them before they leave the ground.

Get your Award w/Merit Grub Control Now! Apply now, to kill the grubs before transforming into Japanese Beetles; and again in August through the end of September to kill the eggs and grubs.

➤ Apply anytime the grass is shown in the picture above.

Food Plot 101: TRAIL MIXES

Brier Ridge Deer Country Trail food plot mix was formulated to be a quick and easy establishing mix that can withstand full sun to more heavily shaded areas. It contains species that can perform better than others in areas such as logging roads and trails located directly in the woods. Keep in mind, broadleaves and grasses do need some sunlight to grow.

| DEER COUNTRY TRAIL MIX | | | |
|------------------------|-----------------|--------------------|----|
| ANNUAL/ PERENNIAL | 10 (Drilled) | 15-20 (Brdcast) | 25 |

- Spring/fall planted perennial mix offering year-round food source
- Performs well on light to heavy soil types in moderate shade to full sun
- Very quick & easy establishment
- Offers shade tolerant species

Alternative that is solely perennial and great for an ATV trail: Combine 5 lbs/ acre of any Perennial Clover(s) with 15 - 20 lbs/ acre of Creeping Red Fescue (75% Creeping Red Fescue/25% Clover). This alternative will handle more shade due to the 75% of Creeping Red Fescue. Alsike White and Duration Red clovers are the top picks for this trail mix, due to their high winter hardiness. You can use one or both. Each seed is sold separately by the bag or lb. You can mix the seed or we can mix the seed for you; a \$25 mixing fee will apply.

Best Management Practices; Mowing: Mowing has two primary advantages. First, it reduces weeds and second, it improves the food plot's productivity. Mowing before the weed's seed heads are produced prevents weeds from spreading. Mowing also keeps the plants shorter, which deer prefer because it has less fiber, is higher in protein and more nutrients reside in the younger leaves and stems.
