

DESCRIPTION

DUSTY DOWNS is recommended for use wherever dust transmission must be controlled. Race tracks, construction sites, unpaved roads.

DUSTY DOWNS makes water wetter when mixed in watering trucks. Site ground is compacted by vehicular traffic rather than becoming airborne. Highly concentrated, it will save labor, time, money, and water. Eliminates the need to be constantly rewetting caused by rapid water evaporation.

DUSTY DOWNS keeps equipment, machinery, shelves and stock dust free and unsoiled. It reduces equipment and machinery damage and deterioration.

DUSTY DOWNS controls dust chemically by trapping, holding and neutralizing the electrostatic charge, inhibiting dust movement.

ADVANTAGES

- Controls Dust Chemically
- Promotes Healthy Environment
- Prevents Splatter
- Reducing water consumption
- Reduces Maintenance Costs
- Reduces Damage to Equipment
- Reduces airborne dust
- Estimated Coverage Rate Per Gallon - in watering truck 1,000 to 3,000 gallons of water.

FOR USE BY

- Building Contractors
- Site Contractors
- Concrete Finishers
- Terrazzo Contractors
- E.I.F.S. Applicators
- Specialty Contractors
- Masonry Contractors
- Plaster Contractors
